

LIBERALISM VICTORIOUS THROUGHOUT CANADA

Showing of New Party Is Biggest Surprise of Election; Social Credit Gets 17 Seats

J. H. Rammell Imports Ram from Old Country

J. H. Rammell of the Lacombe district recently imported a registered Suffolk ram from the Old Country. This ram is from the sheep flock of Lord Ellesmere, one of the outstanding sheep breeders in England. The sire of the ram was the 2nd prize winner in the Ipswich, England, show and sale, and was in the champion pen of five. This prize winning sire was sold for \$100. It is considered this ram will be a decided asset to the sheep flock of Mr. Rammell, and bring up to a still higher standard the reputation of the district for high class sheep.

Special Thank Offering Solicited for Church

Plans for the Thank-offering and supper meeting of Friday, October 25, were completed at the regular meeting of the W.M.S. on Tuesday, October 15, at the home of Mrs. R. McFadden. Messdames French, Mitchell, Broderick, Todd, A. Gilmore and Reeves were appointed to arrange tables, and a program is being prepared by Mrs. Layton, Mrs. Miesner and Mrs. Sweet. Members are asked to invite a friend to the meeting. Proceeds from the autograph quilt auction to approximately \$300.00. In the centre block is a beautiful design of St. Andrew's Church, worked by Mrs. P. MacDonald, while well over 200 names of the townspeople are worked into the other blocks in the quilt. Many garments are still needed to fill the supply allocation of sufficient clothing for seven boys 10 to 14 years of age, and members have agreed to meet at Mrs. A. Gilmore's on Tuesday evening, Oct. 29 to look over and mend the supplies which have already been sent in. Devotional exercises were led by Mrs. R. B. Layton, after which a questionnaire was taken by Mrs. U. E. Reeves, Mrs. Miesner and Mrs. Todd. The November meeting will be held at the home of Mrs. C. E. Todd on the third Tuesday of November.

The Churches

ST. ANDREW'S UNITED CHURCH Rev. R. B. Layton, B.A., B.D., Minister. Services at 11 a.m. and 7:30 p.m. Sunday School at 11 a.m. Morning subject: "Acting reasonably with a Reasonable God." Come now, saith the Lord, let us reason together. Though your sins be as scarlet, they shall be as white as snow. The evening subject will be: "The Healing Touch of Jesus." Will we be more thankful if we trust in Jesus? A large crowd is expected on Friday at the noon luncheon in the Church Hall, when the Moderator of the United Church, the Right Reverend Richard Roberts, D.D. of Toronto, will speak. The Communion of the Lord's Supper will be dispensed at the evening service on October 27, which will be observed as Thanksgiving Sunday.

THE CHURCH OF ENGLAND IN CANADA

Diocese of Calgary St. Cyprian's Church, Lacombe Incumbent: The Rev. T. H. Chapman. Licensed Lay Readers: Messrs. E. H. Jones, K.C. and A. T. Inskip, Esq. Organist: Mrs. D. L. Wright. Friday, 7:30 p.m. Choir practice. October 20th, 18th Sunday After Trinity. 10:00 a.m. Children's service. 11:00 a.m. Holy Communion. 7:30 p.m. Evening prayer. All services in the United Church Hall. The 3rd Sunday in October is always observed as "Children's Day." Parents are invited to come with their children at 10 a.m. We expect to hold our Annual Harvest Thanksgiving Service on October 27. A letter will go out in time to give definite notification of this. The Bishop has promised to be with us at 11 a.m. on Sunday, November 10 to dedicate the improvements now being made on our church.

BAPTIST CHURCH

Only two Sundays and the pastor closes his work at Lacombe and Clive. Sunday the 27th will be his last in Alberta. He will leave for the States during the course of the last week of the month. Every friend and member of the church is cordially invited to attend the next two Sunday evening services. Sunday eve. at 7:30, an evangelistic address by the pastor, "You Need Jesus." Sunday morning at 11, Church School. The pastor will tell Bible and Missionary stories at Sunny Crest at 10:30 and preach at 11 next Sunday. Friday evening at 8 p.m. at the home of Mr. Neil MacFarlane, the monthly business meeting of the church will be held. Every member should be present.

OTTAWA—The Liberal Party stood victorious throughout Canada Tuesday, with the largest house majority any party ever has had in Canadian history.

On Thursday morning the standing of the following parties throughout the Dominion were as follows:

LIBERALS.....169
CONSERVATIVES.....41
SOCIAL CREDIT.....17
C.C.F.....8
Cabinet ministers and Conservative front-benchers topped like tall pines in a northern blizzard. And the sweep was not limited to one section of the country. It was general, devastating, and at one time it looked as if only a yeoman's guard would be left. But later returns gave Mr. Bennett a strong, experienced following in the new house.

Never before have the Canadian people elected a government so emphatically. The next approach was in 1917 when Sir Robert Borden, campaigning as a Unionist, elected 153 members. And never before has one of the old-line parties won so low, the worst showing being in 1921 when Conservatives fell to 50 seats in the house.

Reconstructionists and the C.C.F., each ranking its initial bid for power federally, failed miserably. Neither party elected a man east of the great lakes. In the west, the C.C.F. picked up a few seats but Hon. H. H. Stevens recorded his party's line victory by his election in East Kootenay, B.C. Liberal Leader King, who will form the next government in his Donkey-chewer riding of Prince Albert, Mr. Bennett was successful in his old riding of West Calgary, J. S. Woodsworth, leader of the C.C.F., was turned by the people of Winnipeg North Centre.

The anti-government sweep started with first returns in the Maritime and jumped westward with the Liberals took every seat in Prince Edward Island. They took every seat in Nova Scotia. They took the one of New Brunswick's 10 seats. Quebec returned to almost a solid Liberal bloc with 55 Liberal and four Conservative seats to back them up. The Conservatives retained only five of the 24 seats they won in 1930, with one still doubtful.

AT LACOMBE

The vote at Lacombe resulted as follows:

CAMPBELL.....247
JAQUES.....235
IRVINE.....77
The final standing for the whole riding at time of going to press was: 204 Polls out of 215
JAQUES.....7810
CAMPBELL.....2598
IRVINE.....2628

EGG-LAYING CONTEST WILL START NOV. 1

(Experimental Farms Note) Canada has a system of nationally standardized Egg Laying Contests which are operated on the Experimental Farms throughout the Dominion, under the control of the Dominion Department of Agriculture. There are fourteen of these contests in operation at the present time, one in more in each province, which are provincial in nature and the Canadian contest at Ottawa, which is open to breeders in any province. On November first, the sixteenth series of Egg Laying Contests will commence. Entries are being received at the present time and breeders desirous of entering pens for the coming year should do so forthwith. There are three main reasons for operating these contests: 1. To encourage and improve the rearing of poultry along lines of egg production. 2. To provide a reliable source of information as to the whereabouts of producing strains of birds. 3. To provide a medium of qualification for registration of poultry. While all three objects have served a very useful place in the upbuilding of the poultry industry during the last 15 years, the last named purpose has far outshadowed the others in importance, particularly during the last eight or ten years.

As time goes on it is very gratifying to note that the breeders entering these Laying Contests are making steady progress year after year. Breeders who can select two or three contest pens each successive year and maintain a high standing in this work year after year are the breeders of real worth. They are the breeders who understand the principles of selection for high egg production and egg size, the two prime factors in poultry registration. Indications at present point to a higher average egg production being obtained this year than ever before in many of the contests, and egg size has increased to the point where fewer birds are being disqualified each year for the production of small eggs. It would appear as though there would be a higher percentage of birds qualify for registration during 1935 than during any previous contest year.

Information in connection with Egg Laying Contests and Registration can be obtained from the Poultry Division, Central Experimental Farm, Ottawa, or from any of the Branch Farms throughout Canada.

FREIGHT CAR RUNS WILD, LEAPS ON AUTO

One of eleven freight cars that ran wild on a railroad siding near Cincinnati, Ohio, tore through a concrete ramp, which lifted it 10 feet into the air and fell on a Plymouth automobile parked near the tracks. The automobile's all-steel body not only held up under the terrific impact of the freight car, but when the freight car was removed, the rear springs and tires, which were flattened out, came back up to their normal position and the car was driven away under its own power.

A.M.A. WILL ISSUE "BRIEF" DEMANDING BETTER HIGHWAYS

Action is being taken by the Alberta Motor Association to bring to the attention of the new provincial government immediately the need of improving highways of this province. At the request of branches of the organization, A. B. Mackay, president of the A.M.A., is preparing a brief which will be a forceful presentation on behalf of the motor organizations of this province and of interest to everyone here who either owns or drives a car. Good highways form a subject of special appeal to the new members of the house, judging by the interest shown by the legislature. That makes it all the more reason for believing that when the next session of the legislature is held, strong representations being made now in the interests of better roads will have been impressed upon the legislators.

VICTOR AND VANQUISHED

St. Hon. W. L. MACKENZIE KING St. Hon. R. B. BENNETT

Around The Town

Friends of Mrs. Harry Brown will regret to hear of the death of her mother, Mrs. T. G. Cook of Brockville, Ont. Mrs. Brown was called upon to attend to her mother's affairs a few weeks ago when she was advised of her mother's illness.

A special Thankoffering is being collected by the Sunday School children of St. Andrew's Church, to be handed in on Sunday, October 27. This offering consists of a penny for every year of the giver's life, and it is hoped that each member of the family, from father down to the baby will contribute. Every member and adherent of the church is included in this free-will thankoffering, and if those who have no children in the home will kindly give their gift to one of the G.O.I.T. groups, who will call on you, they will perform the double service of giving pleasure to a child and giving aid to their church.

Miss J. Lee has arrived from Calgary to take charge of the Ladies Ready-to-Wear and Millinery departments of the A. M. Campbell store here. A fine array of new stock is on display in both departments.

Hunters in the vicinity of Gull Lake recently were surprised to see a flock of white swans playing in the water. This is the first time for years that swans in any number have been seen in the district for years.

It is rumored that the proprietor of a well-known hotel in Lacombe is considering the advisability of purchasing the town council for the hay rights on Dolmige street.

The young people of Lacombe have formed a Bridge Club, to meet every two weeks. The first was held at the home of Mary and Betty Gilmore last Friday evening, when first prize was captured by Eleanor Scorgie and consolation prize by Nancy Ford.

The general business meeting of the Lost-We-Forgot Club will be held on Wednesday, October 16, in the Town Hall at 8 p.m.

Hockey Carnival Away to Good Start

The Hockey Carnival got away to a good start Wednesday night at the Curling rink, when in spite of the chilly weather a good crowd attended, and the consensus of opinion prevailed that the entertainment provided created fun for all. The numerous games of chance were well patronized, and the various booths did a good business, and many were seen carrying away their prizes.

Jean George and her dancing troupe from Wetaskiwin made a big hit with the crowd and the tap dancing was exceptionally good.

Two wrestling bouts were put on during the evening, and the boys gave a good account of themselves.

A real carnival spirit prevailed and everyone had a good time. A complete change of program will be presented each night, so make it your duty to be there and enjoy the fun. A \$5.00 prize will be given away each night. Glen Hoppus was the fortunate winner Wednesday night.

Mr. G. Swanson won the coupon (ticket) prize. The carnival will continue for the remaining nights of this week and the ticket will be decided on Saturday night.

Community Action In Soil Drift Control

While individual effort is usually very effective in controlling soil drifting, and every farmer should adopt the best known control measures on his own farm, the most successful results, says the "Soil Drifting Control in the Prairie Provinces" bulletin issued by the Dominion Department of Agriculture, will undoubtedly follow the adoption of community action. The importance of this community action will be readily understood from the fact that an acres of unbladed drifting soil usually expands very rapidly. Moving particles of soil are not always brought to rest by collision with stationary soil particles, and in many cases the latter are caused to join in a general movement under the force of high winds.

The most carefully planned and executed control measures may be entirely nullified if the soil has to withstand the combined action of wind and drifting soil from adjoining unprotected areas. These facts show the necessity for community action if a maximum degree of success in the control of soil drifting is to be obtained.

While the control of drifting on any farm is particularly important to the individual farmer, his success may be aided or hampered by the action of his neighbors.

In order to prevent losses to neighboring property by unprotected summerfallow, the Legislative Assembly of the province of Alberta passed an Act in 1935 known as the "Control of Soil Drifting Act". This act carries certain penalties for failure to provide proper protection to adjacent property. No claim for damages may be made any person, however, unless the claimant himself is complying with the act in regard to soil drifting control measures on his own land.

Blackfalds

Threshing is in full swing again after the recent storm and will soon be finished if weather permits.

The election day passed over very quietly only 98 turned out to vote out of 145. Sixty were Social Credit. Miss Edith Moss was visiting her mother Sunday, returning by train to Lacombe at night.

Vegetable Exhibits At Rural School Fair of Good Quality

Favorable weather was a great help in carrying the Rural School Fair held here on Friday, Oct. 11, to a successful conclusion. Several factors worked against a large exhibit; and prevented some schools from entering at all. The quality of the vegetable exhibits was good and the live stock made up in quality what they lacked in quantity, and the hall exhibits were very creditable. The judges were as follows: For domestic work, Mrs. A. T. Kemp and Mrs. G. R. Holston; Olds; vegetables, Mr. Holston; Olds; and Mrs. G. R. Ramsey, Lacombe; livestock, Mr. H. E. Wilson, Lacombe.

Bridge Parties Held to Raise Funds—I.O.D.E.

Under the auspices of the I.O.D.E. a number of bridge parties were held during the past week to raise funds toward the high school scholarships, which are given annually, the hostesses being Mrs. Clark, Mrs. F. W. Pratt, Mrs. R. Ramsey, Mrs. A. E. Wilson, Mrs. Botell, Miss F. Simpkins, Mrs. Gilmore, Mrs. C. Gilles. In all 19 tables were played and Mrs. C. Gilles was the prize winner with a score of 260.

ANNUAL LACOMBE SHEEP SALE A HUGE SUCCESS

Prices Obtained for Grade and Pure Bred Ewes Were Up Over Last Year

The annual Lacombe Sheep Sale was held at the Exhibition Grounds last Thursday, Oct. 10. Ideal weather prevailed and a splendid crowd was in attendance, resulting in a successful sale. The standard of the stock was up to the usual, although the entries were a few less than last year, and prices ranged about the same.

A number of entries was received from outside of the Lacombe district, which included the University of Alberta and E. B. Williamson of Edmonton, also from Albert Hibbert, Kneel Hill Valley.

A top price of \$36.50 went to John Sauve, Lacombe, for a yearling Hampshire ram. University of Alberta took a second high of \$40.00, and John Sauve a third of \$27.00.

Top price for purebred ewes was \$9.00. Sixty-three purebred rams were sold for \$888.00 for an average of \$14.10. Five hundred and sixty grade ewes brought \$176.15 for an average of \$3.53, and twenty-eight pure bred ewes sold for \$180.00, for an average of \$6.45.

Prize-winners were as follows: Hampshire, ram lamba, first and champion, Peter Jamieson, Alton; second, F. L. Lawson, Penhold; third, Peter Jamieson.

Rams, one year and over: first and grand champion, second and third, were all taken by the University of Alberta: rams one year, old, first and grand champion, Phyllis Jenkins, Gull Lake; second, G. A. Graham, Bentley; third, James Cruickshank, Red Deer.

Ram lamb: first and champion, second and third were all taken by E. B. Williamson, Edmonton.

Suffolk: Ram lamb, first, second and third and champion, University of Alberta.

Rams, one year and over: first and champion, University of Alberta. Second and reserve champion, J. H. Rammell, Lacombe.

For purposes of comparison last year's prices are quoted as follows: Purebred and twenty-five grade ewes were sold for an average of \$2.45; one hundred and forty-two pure bred ewes averaged \$4.82 and eighty grade ewes \$3.45.

C. P. Dammond, Bentley, was the auctioneer, and Jesse Fraser, clerk.

Haynes

Threshing machines are humming again after almost a week's layoff owing to snow and rain.

The September meeting of the Haynes Ladies Aid was held at the home of Mrs. Kirkham, the ladies are planning on holding a bazaar and chicken supper some time around the first of November.

After the business meeting a social hour was spent over the tea cups.

The next meeting will be held at the home of Mrs. Lakeman, the fourth Wednesday in October when arrangements for the chicken supper will be completed.

A Novelty Dance will be held in the Haynes Hall on Friday, October 18. Music by Royal's orchestra.

Mr. and Mrs. Ole Boode of Red Deer were visiting friends and relatives around Haynes on Sunday.

Mr. and Mrs. French of Lacombe visited at the home of their daughter, Mrs. Paul on Sunday.

Quite a number from the Haynes district attended the Sheep Sale held in Lacombe last week.

The October meeting of the Haynes Women's Club was held in the church. The ladies are busy hooking a rug which will be drawn for some time before Christmas.

A picture show can be seen here every two weeks.

SALADA TEA

Controlling The Rust Menace

Very little reflection is required to demonstrate that an expenditure of ten years' intensive work by trained scientists and \$600,000 of coin of the realm is a low price to pay for insurance of Western Canada's future wheat crops against the appalling loss which a few days of rust infestation can levy against the farmers of the West.

The \$600,000 referred to and the ten years spent in work in the laboratory and the field, it was recently announced, is the cost to the nation to date, of producing an unnamed wheat which, according to authorities, is able to withstand a rust epidemic unscathed and at the same time produce a kernel with all the desirable attributes of the best commercial varieties of bread wheat.

Coupled with this announcement was the further statement that this new wheat can be multiplied to a sufficient extent at Dominion government experimental farms and on private lands under government supervision to enable a general distribution of seed to be made to the farmers of the west in 1937.

These announcements were accompanied by a further declaration of considerable importance, namely, that the government intends to retain control of the source of supply of this valuable seed and to see to it that the farmers are not exploited by private concerns in connection with its distribution.

The statement means that the farmers of Western Canada will be able to secure in two years time a substantial supply of seed wheat that is guaranteed to enable them to grow a crop completely immune from ravages by rust, and at a reasonable price, probably at cost.

It is perhaps a coincidence that these announcements were made at a time when Western Canadian wheat crops were hit by the worst infection of rust that the west has known in history but the information should put new heart into the many thousands of farmers who this summer saw their hopes of recovery blighted when millions of rust spores descended on the most promising crop in years and slaughtered yield and grade which meant reducing price to the vanishing point.

The news given in these important announcements may well mean that 1935 will be the last time that Western Canadian farmers have to suffer tremendous loss from rust infestation. The statement is made with caution, however, for although it is not usual for severe rust infestation to follow in successive years, it cannot be stated affirmatively that it will not occur again before sufficient of the new wheat is grown to make a repetition of the 1935 calamity an impossibility.

Results of the work that has been done during the ten years' quest for a rust resistant wheat and laboratory and field trials of the strains which have been produced, however, appear to indicate that the battle against rust has been won by the scientist and agronomist.

There is additional comfort for the farmer, however, in another coincident announcement and that is that some of the five strains of rust resistant wheat which are being increased this year also show a tendency to resist other diseases, those mentioned specifically being stinking smut, leaf rust and one of the varieties is reported as "moderately resistant" to loose smut.

So that it is possible that while the experts have won their fight against rust they have at the same time scored at least partial victory in the battle against some of the other diseases to which wheat is heir. To what extent these other disease pests have been overcome while the major conflict was being waged time and experiment alone will prove. It is safe to say, however, that these apparent advantages will be followed up with the same vigor that these scientists have shown in their now successful efforts to overcome the major enemy.

Definite proof that the new wheat is all that is claimed for it exists as a result of field trials and laboratory tests which have been made during the ten years the work has been in progress and particularly this season.

In field plots the new wheat showed up clean and bright while alongside it the other standard varieties of commercial wheat were sick with the disease. Laboratory and commercial tests have proven conclusively that the new wheat has milling and baking qualities equal to that of Marquis and Reward.

The tests have demonstrated equally conclusively that the new wheat has the requisite length and strength of straw, yield, earliness, appearance of kernel and weight per bushel possessed by the best of the present day commercial varieties.

In other words the new wheat fills all the requirements of the type of hard spring wheat which has made Western Canada famous in the world's bread markets and has the additional ability to withstand rust, and perhaps to withstand some of the other diseases which periodically take toll of the Western grain farmer.

A Romantic Career

A. W. Martin, British Diplomat, is Adviser in Ethiopia

No member of London's diplomatic circle bears a more heavy responsibility at this time than Dr. A. W. Martin, who is the minister plenipotentiary in London to the Emperor of Ethiopia. His career is one of the most romantic in all the annals of the diplomatic service. Sixty-seven years ago, in 1868, he was picked up as a year-old baby on the battlefield of Magdala by a British soldier, whose regiment promptly adopted him. A kindly English lady took charge of him, and gave him his name of Araj Warguch Martin. He graduated in medicine at Edinburgh University and entered the Indian Government's medical service in Burma, whence on retirement he returned to Addis Ababa to become one of the present Emperor's most trusted and intimate advisers—Ottawa Journal.

The catfish gets its name from the cat-like whiskers and purring noise it makes when caught.

A Strange City

Queer Place in Derbyshire, England Has Only Eight Houses

A strange city may be found in England within two miles of Chesterfield's famous crooked spire. It is another Derbyshire curiosity. Down a winding bridle-path is Tapton City—the queerest and smallest city in the world. It has only eight houses and 25 inhabitants. It is the city of nothing, for there is no church, no chapel, no public-house, no shop, no post office. No electricity or gas is found there—they use oil lamps. How or why it became a city nobody knows, but it is believed to have been founded on the ashes of a Roman camp.

Radio Clock Patented

Radio clock which requires no winding has been patented at Prague. Known as a "radio clock," which can be operated from a distance of 500 miles, it has as works a small receiving set to guide the progress of the hands. The exact time is recorded on the basis of astronomical data.

Exempt From Taxes

Men Live In Tin Shacks On City Dump Near Winnipeg

It is the smallest town in Manitoba with only four houses and a blacksmith shop. The quaint hamlet near Winnipeg, nestled in a sequestered corner of the vast rubbish heap that constitutes suburban Elmwood's nuisance grounds. No taxes are paid in the town and the four citizens say they are happy in "Tinsbakia."

"Tinsbakia" gets its name from the hundreds of tin cans used in the construction of the huts the men live in. Henry, Joe, Mike and John are the partners in the Tinsbakia Salvage Corporation, the major, and only, industry of the town. All day long they prospect the refuse during gathering tin cans and anything they might patch up and sell.

Joe is the specialist of the town. He specializes in tin cans and no matter how badly they are damaged Joe fixes them up for him in an expert manner. Joe also runs the town garden where potatoes, tomatoes, squash and onions are growing well.

John is the mayor of the town by right of seniority, for he chose the site in 1924 and has been living there ever since. He explained the men are weary of the single men's relief commission and with the gross allowance provided by the commission plus the earnings from the salvage work they are able to exist. John himself specializes in bottles and carries firewood.

Mayor John explained the Tinsbakia houses are built by the simple process of standing bedsprings on end and filling the spaces with tin or wood or old linoleum and covering the lot with a large tin sheet. The tin roof is then sodded and the corners sealed with clay. All the materials are salvaged from the scrap-heap.

A Prize From Bermuda

Rare Bird Specimen Is Now In American Museum

The second specimen of the pterodroma called bird to be found in 300 years has been reported by Dr. William Beebe, United States naturalist and explorer.

Said to have been found in thousands by early settlers of the island, the specimen was supposed to have been a common bird until 1629, the birds being peculiar to Bermuda.

The cabot bird described by William Strachey in 1610 as "a silly bird" was slaughtered for food during periods of famine. It was so tame it would alight on the shoulders of the settlers, Strachey wrote.

The latest specimen was found at the foot of St. David's lighthouse. It had dashed itself to death against the glass protecting the light.

The lighthouse keeper sent the bird to Dr. Beebe, who in turn forwarded it to the American Museum of Natural History for identification. Authorities of the museum have informed him the measurements and characteristics of the bird conform with those of a specimen found in 1906 by Louis L. Mowbray, another Bermuda scientist.

"I am leaving the bird for the present on deposit in the American museum," Dr. Beebe said, "but if a government museum is ever established in Bermuda, I shall most certainly present this bird, as its proper place should be on exhibition in Bermuda."

Liner Gangway Blocked

Passengers At Southampton Held Up By Thousands Of Bees

Thousands of bees held up passengers about to embark on the liner Moldavia at Southampton, England. The bee swarms, called British Day Boat, made of shivering lifetime chromium, it is six inches in diameter, specially designed in modern lines, and equipped with a charming sculpture of the "Quintus." On the rim are engraved the names of the Annette, Enette, Marie, Yvonne, and Cecile. Besides being an ideal cereal bowl for a child, it has a distinctive olive and celery dish or bon-bon dish.

Readers can obtain this delightful gift by sending two Quaker Oats cereal marks, plus fifteen cents to help cover postage and handling charges, to The Quaker Oats Company, Saskatoon, Sask.

Transmits Sound And Vision Television In Germany Covers Distance Of Nearly 50 Miles

A great advance in television service has been achieved by a transmission from Wittenberg to Gildenhall, Germany, a distance of nearly 50 miles. The transmission, both for sound and vision, is stated to have been very good. Dr. M. Hadamowski, head of the German broadcasting service, was seen and heard by the men of the labor camp at Gildenhall, whom he addressed. A number of news pictures were transmitted with results reported to be equally satisfactory.

The vast unexplored continent at the South Pole, Antarctica, is believed to be about the size of the United States and Mexico combined. Geographers are not certain that it is one large continent; it may be made up of islands.

An English chemist has developed a paint for outdoor use that is not affected by the sun's rays that it appears black in the daytime and white at night.

FASHION FANCIES

A SHEER WOOLEN TO WEAR RIGHT NOW—SO SIMPLE THAT EVEN AN INEXPERIENCED SEWER CAN MAKE IT

By Ellen Worth

Here's a smart little woolen dress to be thinking about—or maybe you'd prefer it in a wool-like silk or velvet. It's so very jaunty and tailored looking for school, college or the office. Made in rust novelty woolen, this little model, that only stimulates blouse and skirt, will be found very practical.

Easy to make for the two-piece skirt joins the blouse 'neath the removable belt. Style No. 450 is designed for sizes 14, 16, 18 years, 36, 38 and 40-inches bust. Size 16 requires 4 yards of 39-inch material with 2 1/2 yards of bias.

Patterns 15c each. Address mail orders to: Pattern Department, Winnipeg Newspaper Union, 375 McDermot Ave., E., Winnipeg.

Let the new Fall and Winter Fashion Magazine assist you in assembling your family's fall clothes. There are designs for every type and every occasion. And of course one of our perfect-fitting patterns is obtainable for every design illustrated. Don't delay! Send for your copy today!

Attraction For Calgary Zoo

Life Size Prehistoric Monsters Will Be On Exhibition

Through co-operation of the Dominion government with the Calgary Zoological Society, Calgary in the near future will become the location of a fascinating exhibition of fossilized remains and replicas of dinosaurs and other monsters which roamed the earth some 60,000,000 years ago. The exhibit, taking the form of a fossil garden, will be located at the west end of St. George's Island Park, and will contain life-size replicas of prehistoric monsters.

Work has been begun on the framework of one of the dinosaurs, and three in all are expected to be completed this year. One will be 12 feet long, another 14 feet, and the third 38 feet long. They will be placed on display within an enclosure on the west side of the island. Fossilized remains of prehistoric animals, at present being taken from the Red Deer river area, will be placed around the enclosure along with exhibits of petrified wood.

Only Four Feet Wide

Philadelphia Is To Have Narrowest Building In U.S.

A building being erected at Philadelphia, Pennsylvania, will be, it is believed, the narrowest in the United States. It will be only four feet wide. The site of the building is all that is left of a corner plot from which the city sliced most of the ground in order to widen a street. The new building will be constructed of stainless steel, and half of it will contain a restaurant which will have a front which can be removed in summer.

The tunnel which Persian troops dug under the wall of Dura to capture the city in 256 A.D. has been uncovered by archaeologists.

Ninety per cent. of the world's nickel supply is produced by Canada.

The reversible snake-lizard travels backwards or forwards equally well.

IN UP-TO-DATE STABLES

—Old Reliable Minard's—

When horses come in to stable with wrenched hocks, sore shins, or sore hocks, the thing to do is get the Minard's. It is the best. I have found your Minard's Lotion especially good for horses who come in to stable. A health doctor presented Minard's Lotion over 30 years ago. Still valuable in every stable and every home.

New Type Flying Boat

Soviet Aviation Authorities Try Out Parachute Kite

A passenger, and freight-carrying "parachute kite" which Soviet aviation authorities said they believed would be able to ascend into the stratosphere, had its first successful trial lifting four tons of cargo.

An ordinary freight parachute, with a dome 60 feet in diameter, was used. The load was attached with short ropes leading from one side of the parachute. The other side bulges upward, giving the lifting power. Longer ropes, running from the bulging side, also were attached to a load which, for passenger-carrying purposes, would consist of a gondola. By manoeuvring the longer rope, the crew, experts said, could steer the parachute and control its ascent and descent.

The whole combination load was called a "parachute train" in the official description by Prof. I. Grokhovsky, chief of the experimental institute of the Commissariat of Heavy Industry which is sponsoring the trials. Grokhovsky said he believed the parachute could carry explorers into the stratosphere and described flying in a parachute kite as the safest mode of air travel since the parachute is always opened, assuring a safe descent.

The Machine Age

Opinion Seems To Be That There Will Always Be Unemployment

Evidently the machine age has established a situation wherein a definite percentage of the population is unemployable and all clinging to the state the task of providing for these out of taxation. It is suspected that such a condition is bequeathed on all countries eventually. The American continent, until a few years ago, escaped that penalty because it was new and had the advantage of much natural resources to exploit. With age the handicap of unemployment appears and is ineradicable by the orthodox methods of industry. While every effort ought to be made to provide work for every human being who desires it there is a growing conviction that the problem is likely to become more acute and that the most satisfactory recourse for governments is to make provision in their budgets for the support of a percentage of the population classed as definitely outside the realm of self support. — Brockville Recorder and Times.

Exporters Must Be Careful

Warned Against Sending Goods To Italy Without Guaranteed Payment

The Department of Trade and Commerce said it had received a cable from the Canadian Trade Commissioner at Milan warning Canadian exporters against sending goods to Italy without first taking careful steps to ensure payment.

The cable, sent by A. B. Muddiman, urged careful dealing with Italian importers because of exchange restrictions imposed by the Italian government. "No shipment of goods should be made from Canada to Italy unless the Italian importer has given assurance he has obtained an import permit from the Italian authorities allowing the importation," it said.

Dionne Quintuplets Bowl

Smartly Designed Bowl Is Offered As A Gift

A surprise gift offer which will interest every parent, every child and, in fact, everyone who has ever heard of the world-famous Dionne Quintuplets, has been announced. The article offered is a cereal bowl created in honour of the five little sisters and called the Dionne Quintuplets Bowl. Made of shining lifetime chromium, it is six inches in diameter, specially designed in modern lines, and equipped with a charming sculpture of the "Quintus." On the rim are engraved the names of the Annette, Enette, Marie, Yvonne, and Cecile. Besides being an ideal cereal bowl for a child, it has a distinctive olive and celery dish or bon-bon dish.

Readers can obtain this delightful gift by sending two Quaker Oats cereal marks, plus fifteen cents to help cover postage and handling charges, to The Quaker Oats Company, Saskatoon, Sask.

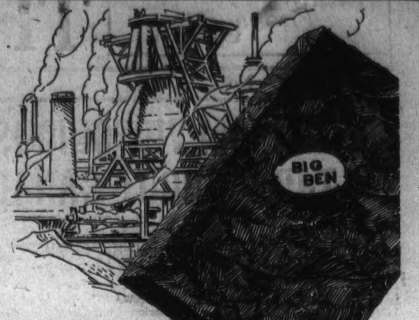

Transmits Sound And Vision

Television In Germany Covers Distance Of Nearly 50 Miles

A great advance in television service has been achieved by a transmission from Wittenberg to Gildenhall, Germany, a distance of nearly 50 miles. The transmission, both for sound and vision, is stated to have been very good. Dr. M. Hadamowski, head of the German broadcasting service, was seen and heard by the men of the labor camp at Gildenhall, whom he addressed. A number of news pictures were transmitted with results reported to be equally satisfactory.

The vast unexplored continent at the South Pole, Antarctica, is believed to be about the size of the United States and Mexico combined. Geographers are not certain that it is one large continent; it may be made up of islands.

An English chemist has developed a paint for outdoor use that is not affected by the sun's rays that it appears black in the daytime and white at night.

THE PERFECT

Chewing Tobacco

Empress Of Ethiopia

Claims She Is Descendant Of Queen Of Sheba

Through all the worries and anxieties brought upon him by Italy's threatened conquest of Ethiopia, Emperor Haile Selassie's most devoted companion and counsellor has been his wife, Empress Walseru. Mennen. Gifted with uncommon intelligence, astuteness and foresight, the 41-year-old Empress urged the Emperor not to yield to Mussolini's threats but to defend the kingdom to the last.

Emperor Haile Selassie is Walseru's fourth husband. Maybe that is why she is called the "Queen of Kings." They have three sons and three daughters. They have been married 23 years, and it is said they have never had a quarrel. The Emperor is most of the higher-caste Ethiopians, is monogamous. Walseru is his only wife.

"Walseru" means literally "Lady of Quality." She is the daughter of a famous provincial prince, and has a very dignified and aristocratic bearing. She was educated by private tutors. The "Queen of Kings," who is fat, not fair, and 40, claims to come from the same Hamitic stock as the famous Queen of Sheba who ruled Ethiopia 3,000 years ago. She also claims descent from the glamorous Cleopatra. She is addressed by her ten million native subjects as "Her Serene and All-Just Majesty." She signs herself "the Conquering Lion of Judah hath conquered."

The Empress speaks no language except the ancient Amharic, which is of Benitic origin. All attendants who approach her shield their mouths with their white shamma (shawl).

Invented New Game

Boys Have Fun Counting Cars Visiting Dionne Babies

Small French-Canadian boys who play around the home of the Dionne quintuplets at Galesburg, Ont., have invented a game that gives some indication of the distances visitors come to see the famous youngsters. The boys count license plates, giving so many points for each state of the United States and each province of Canada, the first boy to eight and identified a license getting the points.

Ontario and Quebec cars are not counted at all. There are too many of them. Motors from other Canada provinces count 10. Those from Michigan, Ohio, New York and Utah, five. All the other states count 10. Game is 500 and it doesn't take long to get that many points in the long stream of cars that lies up to the hospital each day.

An English license is "game" no matter how many points your opponents may have.

Heaviest Air Passenger

United Air Lines Carried Judge Who Weighed 400 Pounds

When County Judge A. W. Dulweber applied for a ticket at the United States Air Lines office at Omaha the booking clerk was in a quandary. The judge weighs four hundred pounds and is probably the heaviest in the world. The clerk did not wish to offend him, but at the same time wondered if he could book him on board an aeroplane on only one ticket. The company were pleased to take him without extra charge, however, as the judge was undoubtedly the biggest passenger they had ever carried, and they wished to mark the occasion.

Canada's Milk Production

The combined production in Canada of all items of concentrated milk (condensed, evaporated, casein and powders) for the seven months of 1935, ended 31 July, totalled 65,355,255 pounds, showing an increase of 9,307,998 pounds, or 17 per cent., over the corresponding seven months of 1934.

Chinese Want Refrigerators

Would Enable Wealthy Class To Eat Fresher Foods

A complete change of diet will soon be available for wealthy Chinese families, according to an official of a United States refrigeration company who passed through Victoria recently on his way back from the Orient.

He reports a good market in China for electrical refrigerators, although they are practically the only modern household appliance finding favor with the Chinese.

The main foods in China for thousands of years have been dried foods. Advent of the refrigerator will enable the wealthier people to use more perishable and fresher foods.

New Kind Of Glass

Invisible, non-reflecting glass—a boon to safety but a jolt to vanity—made its debut in New York. The new glass is capable of deflecting glare from the sun in the daytime and from automobile and street lights at night. It was acknowledged to have only one drawback—people can't stand in front of it and primp.

More than 1,300 persons of London's population claim the high seas as their birthplace. Of these sea babies, more girls are born than boys.

Ali Baba

Problems Of Production Studied Under Prairie Rehabilitation Program

An important and very practical phase of the Prairie Farm Rehabilitation programme centres around the intensive studying of the farm problems of production resulting from drought and soil drifting, also around the demonstrating of the most successful precautionary and controlling measures. As a medium for carrying on this work, the Prairie Farm Rehabilitation Act provides for the establishment of District Experiment Sub-Stations. These sub-stations are located in problem areas, principally in the south and central portions of the three Prairie Provinces, where hardships and financial loss have resulted from varying hazards to crops, community wide in their extent. Up to the present time thirty-nine district experiment sub-stations have been established on varying soil types, and an active programme of work has been instituted. As a broad objective the programme aims to develop a system of farming with as high a degree of permanency as may be possible, a system that may be adaptable to farming areas where grain farming is principally being followed, with little or no rainfall and on soils subject to drifting.

The system of cropping is based primarily on strip farming with its accompanying necessary cultural practices and short crop rotations. The two year rotation of fallow, wheat, alternating has been made widely laid down, although in certain sections where the annual precipitation warrants such a procedure, a three year cropping system of two crops of grain after fallow is being followed. The cereal crop being grown on these short rotations varies in keeping with the individual need and aims to produce wheat primarily as the cash crop, at the same time to grow oats and other cereals as forage, thus building up feed reserves as an assurance against the possibility of recurring short crop years and the resulting winter feed shortage which is frequently experienced. The width of strips vary from eight to sixteen rods, depending on the soil type and its past history with respect to soil drifting or wind erosion. The effect of cover crops and the use of manures and chemical fertilizers is also under experimentation and study as to their effect on controlling soil drifting.

The development of farm home shelter belts to protect the farm buildings, farm home and to give shelter to stock around the paddocks is under way. Definite plans have been made and land summer fallowed this season so as to be required in keeping with the programme to make it possible next spring to set out tree plantations and shelter belts on farms operating as district experiment sub-stations, where they do not now exist, and also to expand the present shelter belts as may be advisable. The farm garden, as a source of supply of vegetables for the family during the summer and winter is being provided for in the layout and is being enclosed in the shelter belt adjoining the buildings. The garden area is being divided into two sections so that each year cropping will take place on summer fallow land. A sufficiently large area is being set aside for this purpose to make the use of horse equipment possible as a labour saving procedure in farm gardening.

To provide adequate pasturage for such livestock as may be kept, including horses for farm use, a permanent grass paddock adjoining the buildings and protected by a tree shelter comes within the programme of work. In many cases where such work is not already done, land has already been seeded to provide this pasture, using Crested wheat grass or Brown grass as the foundation when seeding down. As a supplement to the permanent pasture, as the season advances and growth becomes slower, provision is being made for supplementary pastures, and an area is being seeded down to fall rye as well as to spring grain.

In the study of drought and soil drifting problems on sub-stations, very special attention is being given to the methods of handling the summer-fallow. "Tillage practices" being directed to plant a lumpy surface and to retain as large a portion as possible of stubble and other forms of vegetation on the surface.

In the organization of a sub-station, the land is not purchased but rather a co-operative agreement is entered into with a progressive and interested farmer in the different districts. In consideration of an annual rental for land use, this farmer undertakes to provide the necessary labour and equipment to carry out the work under the direction of a supervisor representing the Dominion Department of Agriculture. To be effective in studying such a problem as that of soil drifting, a fair sized unit is necessary and for such an area up to 640 acres is that utilized in sub-station work. The district experiment sub-station is a community developed organization and aims to study and work with farmers in these districts for their mutual benefit so that sound practices and those most likely to succeed under

such conditions may become general in their application.

District Field Days have been held this year on the sub-stations at which time the station operator and representative of the Dominion Department of Agriculture reviewed the work under way and results being obtained. The extent and direct importance of the problem under consideration has been evident from the group of from 100 to 350 farmers who have assembled to discuss with one another and study their local community problems.

The work in connection with the District Experiment Sub-Stations is being directed by John C. Moynan, chief supervisor of Illustration Stations, Dominion Experimental Farms.

Strange Customs In France

Girls Of Provence Follow Medieval Ideas About Marriage

Following an ancient, medieval custom, Provencal girls still "pop the question," even in 1935.

This is how it is done. The young woman takes a delicious Provencal cake called a "fougasse." Then, she places it with a jar of wine outside her house. In fact, certain old houses have niches in the wall made especially for this purpose.

When her prospective husband appears, he eats the cake and drinks the wine. Finally, he leaves a token in the niche, usually a silver ash or ring. This is his way of saying "Will you marry me?"

She answers the following Sunday, simply by wearing the scarf or whatever it was, when she goes to church. A few weeks later the wedding bells ring.

But if the Provencal girl prepared the "fougasse" as a joke, if she considered it only as a plesantry, she says "No" to the young man by offering him a handful of oats.

Holding up the bridal party after the wedding still is a common custom in Provence. A flower-decked rope is stretched across the street and kept there until the bridegroom pays toll to Cupid's highwayman.

Further, when a French girl marries a young man from another village her old friends barricade the road until the groom has treated everybody to drinks. Instead of resenting this custom, the bride judges her popularity by the size of the crowd that stops.

On the bridal night, friends also serenade the newlywed couple. Sometimes there is music by the local band.

At other times, the serenade is merely a bodiam of noise. In either case, the bridegroom pays the serenaders, as was the custom in rural America years ago.

Would Become Canadian

Waiting For Consent Of Chinese Government Before B.C. Oriental Can Be Naturalized

Lack of consent of the Chinese minister of interior, understood at Ottawa not to be functioning at the moment, is holding up consideration of application for Canadian naturalization of Chen Chung, master chef at the British Columbia government house for 18 years.

Chung's application was received by the naturalization branch of the secretary of state department some time ago. Under the law, however, where a Chinese citizen applies for naturalization in this country, consent of the Chinese minister of interior to renouncing of citizenship by the Oriental must be given.

Sent Sketch Of Dog

B.C. Boy Took No Chances On License For His Pet

Modern art has invaded the Burnaby, B.C., municipal hall. The tax collector recently received the following license application: "Kindly send me a dog license for my dog 'Bum.' He looks like this: (Sketch of an elongated dog of enormous length, short legs and tail.) He is a dachshund or a sausage hound. Enclosed please find \$1. Yours sincerely (signed) Master Ed. Hope, Lochdale P.O." In acknowledging receipt of the license fee the collector sent a tag for a dog like this—with a fair copy of the original sketch.

Won Story-Telling Contest

Man Said Lander Flame Froze During Story

Flames in Paul Bunyon's lantern froze solid one winter when it was 68 degrees below zero and the only way he could put out the light was to break off the flames and toss 'em into the outdoors. The spring they thawed out and burned the St. Mary's river in two.

This tall tale won the championship for Perry Allen of Shepherd, Mich., at the Paul Bunyon story telling contest.

Kids have their scales inside their skins. Their slippiness is a valuable asset to them in escaping from their enemies, and is due to a highly polished skin which exudes a sticky mucus.

An Annoying Habit

Many Coughs Are Merely Nervous And Could Be Prevented

The coughers and their victims will be interested in hearing that the habit of coughing in public is being taken up at a London girls' school and other institutions of learning may follow suit.

The headmistress of this London school will not allow coughing in the classroom, and because of this rule claims she has been able to prevent any epidemic of colds in her school for the past 27 years. If a pupil has a cold and wishes to cough she has to leave the room to do so—and take the germs with her instead of broadcasting them. They are taught that coughing spreads infection, and keep the rule willingly. What a boon to those susceptible to coughs if this rule were enforced in theatres, churches and other places where people congregate.

This English headmistress also has found that most coughs are really only a nervous habit, and the rule developed among her pupils self-restraint which enabled them to control or eliminate the habit. Belief that coughing is a nervous habit can be strengthened by watching and listening to people in a church, when every time the minister is saying something important—the very words you want to catch—half a dozen people will emit short nervous coughs. Teaching pupils in school to avoid contracting and practising this habit would make it a heap more pleasant, as well as healthier, for everybody in general.

—St. Thomas Times-Journal.

Temperature Should Be Low

Anything Above 68 Degrees Affects Quality Of Eggs

It is a well known fact that egg quality is greatly lowered when exposed to too high temperatures. Damage begins as soon as eggs are held at temperatures above 68 degrees, because germ development begins at that point. While much lower temperatures are desirable, yet when germ development is prevented one of the biggest causes of loss of quality has disappeared.

At the recent poultry conference in Chicago, Prof. E. M. Funk, of the University of Missouri, discussed egg temperatures and methods of cooling eggs, based upon tests which he had made. His statement, in part, follows:

"Warm eggs should be put in containers where they are exposed to cool air. Eggs in a wire basket will cool much sooner than if in a basket or case. They should not be put in cases till they have been exposed to lower temperatures for a period of several hours."

"The use of cooled containers instead of warm containers will assist in the cooling of the eggs. The flats, fliers and crates in the world that the amount of latent heat, which should be removed before the eggs are cooled."

"The circulating air in the room will speed the cooling process greatly, especially if the eggs are contained in a wire basket or tray."

Good Advice For Anyone

Read Newspaper Thoroughly To Learn About World News

Dr. Harold A. Larrabee, Union College philosophy professor, advised college students at Salamanca, N.Y., to read at least one newspaper critically and thoroughly daily.

"You will have to read something besides the sports pages and the movie magazines," he said.

"By critically, I mean with full awareness that news-gathering is a business as well as a profession; and by thoroughly, I do not mean every word of every column, but in such a manner that you can understand something about every major item that concerns any large body of your fellow-men, enough to appear in print."

A Flying Motor Car

Autogiro Descended In Fog And Finished Journey On Road

But ponder this little story of an autogiro. Flying out of the new winged autogiros which have been designed with an eye to mass production and the family garage, James Ray the other day encountered a dense fog in the heart of the Alleghenies, near Tyrone, Pa. The fog had stopped other air traffic. But it didn't stop Mr. Ray. He just came down on a road, folded his flying rotor blades and taxied home over the mountains.

And if he had really been in a big hurry he could have hopped right over any big truck that were hogging the highway in front of him.—Chicago Daily News.

South Africa's Liquor Laws

In some parts of South Africa a European can be sent to jail for anything from six months (first offense) to three years if he gives a native a drink of intoxicating liquor. In the Transvaal a white person may drink, but not a colored person or even an Asiatic. The bartenders and waiters are colored, and the liquor laws are very strict regarding them.

The skeleton of a giant Irishman, seven feet, seven inches tall, is one of the remarkable specimens in the College of Surgeons, London.

BATTLE OF THE MARNE ANNIVERSARY

"To those Canadian soldiers who remember the Battle of the Marne this picture will have special interest. Here we see the crowd outside the Cathedral of Meaux after the commemoration service which was attended by several hundred ex-service men, who, twenty-one years previous, were undergoing the hardships of a strenuous battle."

A Common Mistake

No Human Being Ever Had Teeth That Were White

Novelists talk of "heroiness with 'pearly white' teeth," but no human being ever had teeth that were white, or anything like white, says the Milwaukee Journal. Examine your own against a sheet of white paper and you will see how true this is. More than that you will make the odd discovery that your teeth are not all the same white.

The first artificial teeth were made white, and dentists were obliged to stain them; nowadays they have no trouble of that kind, for they have no fewer than 30 different shades from which to choose, and there is no tooth in the world that cannot be perfectly matched.

The variety in shape is equally wide. In all, the dentist has a choice of something like 2,000 different shapes.

Artificial teeth are made of a special porcelain. Before they were sometimes carved out of solid ivory.

Market For Live Stock

Between Aug. 1 and Sept. 5 there were 1,163 head of stock and four cattle moved from Edmonton to the Ontario market. The United States market also opened for hogs from the Edmonton area, 489 going to Spokane and 137 to St. Paul, beside 88 cattle to the latter market, in the period given.

Ducks Need Some Shelter

Will Not Thrive If Protection Not Given At Night

There is a fairly common impression that ducks require no shelter. This is quite correct so far as running about during the day is concerned, except in hottest summer; but they never thrive properly without some shelter at night. It need not be elaborate, nor large enough for them all to promenade in it all night. It is unlikely that many will stay in it at a time. They like to be outside, and yet to be able to seek shelter occasionally, and the shelter must be perfectly dry.

Unless the house is made on sloping ground the easiest way to keep it dry is to fill it with six inches of earth and to dig a little drain around it. Put three to six inches of straw on the floor, and the ducks will be warm and dry as soon as they enter. Five feet is high enough, for the pen with three sides perfectly wind-proof, and the fourth partly closed.

Prefer Being In Jail

The 1,200 inmates of Canton's first prison, 200 of whom are women, "are better off in the prison than they would be outside working as laborers or than they would be as peasants living on farms." This is the finding of a committee of Chinese newspapermen who have investigated the first prison. The committee finds most of the prisoners dislike the idea of freedom.

The SNAPSHOT GUILD

IT'S FAIR TIME

Left—"The Country Fair or bust?" Right—Even the side-show offers snapshotting opportunities.

Let's forget about the home, the seashore, the woods and pictures of the children and to-day think about picture making opportunities at the county fair.

September is fair time and I'll wager that mighty few of you have ever given any thought to this angle of snapshotting. Right? Honestly the county fair offers more possibilities for snapshotting than space will permit telling about. Can't you see the bakers in front of the side-show extolling in husky, loud voices the merits of their shows? There's the side-show band with its battered instruments letting forth loud blasts of discordant music; the not so clean looking vendors of dolls, trick games, balloons and various other things of questionable value; every one of them a subject for good human interest pictures.

But let's look toward the more serious side of the fair—the exhibits, for instance. By making intelligent use of your camera you can take home with you not only pictures of general interest but if you are particularly interested in farm products you can snap record pictures that may later prove invaluable. There is the judging of cattle, sheep, horses and hogs, for instance. If the judging is done in an open-air ring you can get the picture of the winner of the blue ribbon with any camera—box type or folding.

In taking such pictures, or any picture, as far as that is concerned, don't just look in the finder and snap

the first thing you see. If the animal being judged has any unusual markings manage to get to a place near the ring where these markings show up the best in your finder. Try too to avoid unattractive backgrounds such as telephone poles, wires or sheds.

Among the innumerable picture possibilities at the fair you will surely want to take some pictures and a fair isn't complete without the thrill of horse racing, whether they feature the veteran driver proudly seated in his sulky or the young, dare-devil jockey.

Don't snap a picture at the start of the race as the drivers or jockeys maneuver their horses to the barrier or starting post and by all means take your position at the turn of the track as the horses dash perilously around the curve and into the "home stretch."

Remember this, however. If you do not have a camera with a very fast shutter, say one that will operate at 1/500 of a second or faster, don't try to snap a rapidly moving object as it whizzes directly across the lens of the camera or direct line of vision. Your chance of getting a good, sharp picture are much greater if you catch your subject at an angle of about 45 degrees. It's always better to play safe than to take a chance and perhaps get a blurred picture. Load your camera with film to-day and be ready for an evening day when you are "off to the fair".

JOHN VAN GULDER.

Social Hygiene Council Undertakes To Organize Health League Of Canada

Salt In Road Construction

New Type Of Surfacing Is Called So'l Concrete

The speed record of Sir Malcolm Campbell, made on the salt surface of the Bonneville flats in Utah has called attention to the use of salt in road building, and particularly to research work in this connection by a Canadian in Nova Scotia eight years ago. Roads, embodying principles outlined by A. R. Chambers of New Glasgow, have been built in the United States and have been found to stand up against the ravages of weather and traffic, despite the inexpensiveness of building costs and maintenance. Roads of this type are being built in Ontario, particularly in Lambton and Simcoe counties.

Early this year, the United States government announced the appointment of a committee to work under the direction of the Highway Research Board, to study the application of common salt as a stabilizing chemical for use in clay-gravel roads.

Seeking a solution to the dust problem of Nova Scotia's highways, Mr. Chambers constructed short stretches of roadway at Truro and Elmsdale. Mr. Chambers' road-building projects attracted highway experts from the state of Michigan; who, hearing of the Canadian experiment, journeyed to Nova Scotia, inspected the highway built by Chambers and returned home to conduct further research into the value and practicability of all the salt-clay combination. Today, an entirely new type of road surfacing has been developed and is known as so'l concrete.

Grasshopper Invasions

Matter Is Discussed At Imperial Entomological Conference

Best methods of dealing with locust and grasshopper invasions was discussed by the fourth Imperial Entomological conference in London.

H. G. Crawford, of the entomological branch of the federal department of agriculture at Ottawa, declared the total area of North America infested with grasshoppers in varying degrees this year was 80,000,000 acres.

The loss last year had been reduced considerably following the campaign in Saskatchewan, the Canadian delegate added.

Dr. A. E. Cameron, of Scotland, suggested the outbreak of the grasshopper plague in Canada might prove a blessing in disguise "since the Dominion has already produced more grain than can be distributed."

Would Abandon Branch Lines

Make Applications For Closing Lines In Manitoba And B.C.

Applications for leave to abandon two branch lines in Manitoba and one in British Columbia, operated by its subsidiaries, have been filed by representatives of the Great Northern Railway in Winnipeg with the board of railway commissioners.

In Manitoba, the applications seek abandonment of lines running from Brandon to the international boundary and from Morden to the international boundary, operated by the Brandon, Saskatchewan and Hudson Bay Railway.

In British Columbia, leave to abandon the line from Princeton to the international boundary, operated by the Vancouver, Victoria and Eastern Railway, is sought.

Radio Pioneer Dead

Was Instrumental In Placing Wireless On Many Ships

Charles Crittenden Galbraith, one of the first men to equip steamships with wireless telegraphy and founder of C. C. Galbraith & Sons, manufacturers of lifeboats, life-saving equipment and marine supplies, died recently in Buffalo. He was 74 years old, and death was due to heart failure after an illness of two years.

In 1891 he became interested in wireless telegraphy. He was associated with the De Forest Wireless and the United Wireless Companies, and it was due to his efforts that many steamships on the Atlantic and Pacific Oceans and in the Great Lakes were equipped with wireless.

New Army Blimp

United States Machine Pronounced A Success After Tests

The United States army tested its huge TC-4, described as the largest non-rigid airship in the world, and pronounced it "very successful." For two hours the giant blimp, with overall dimensions of 235 by 54 feet and manned by a crew of nine, cruised over Scott Field, Ill., for the benefit of ground observers. The ship is estimated to have an altitude possibility of 10,000 feet. The blimp is powered by three air-cooled engines capable of developing a speed of 90 miles an hour.

According to statistics, single people do not live as long as married people.

By reason of many suggestions coming from all parts of Canada and because of the ever increasing need of some voluntary organization capable of spreading knowledge regarding preventable illness, the Canadian Social Hygiene Council has undertaken the responsibility of organizing the Health League of Canada.

By this action the officers and directors will be enabled to greatly enlarge the scope and activities of the present organization and make more concrete contributions to the cause of public health and preventive medicine than in the past. It is felt by the National Board and by members generally throughout Canada that this step is in accord with the growing realization of the importance of health as a Dominion and indeed an international issue.

The Health League of Canada will undertake a continuous programme of education in the means of preventing illness and prolonging life and the need for governments and private action to this end, using the press, the radio, the pamphlet and the public speaker as a means of transmitting reliable information to the public. Widespread support of this new development is already assured by communications from departments of health, educationalists, service clubs, churches and religious leaders throughout Canada.

The Honourable Mr. Justice Riddell, distinguished jurist, member of the Supreme Court of Ontario and internationally known as a writer and speaker, has been president of the Canadian Social Hygiene Council for the fifteen years of its existence. He now becomes president of the new organization.

"The solution of health problems rests in the development of a co-ordinated health programme under Dominion leadership," Dr. Bates says, "and the Health League of Canada proposes to aggressively work toward this end."

It is understood, of course, that leadership means nothing more than the term implies, nor is it advocated that there should be any change in the present relationship of the Dominion and Provincial Departments of Health. It is desired at this time only to emphasize the importance of health as a national issue and the desirability of co-operation on the part of all to the effect that illness rates may be cut to an absolute minimum.

The Island Of Raasay

Was Once Owned By Follower Of Bonnie Prince Charlie

The suggestion made in the British House of Commons the other day that the Ministry of War surrender to the Ministry of War the 28-square-mile island of Raasay, one mile northeast of Skye, Scotland, for a British Heligoland, has revived a couple of reminiscences of the forgotten island. Dr. Samuel Johnson and Boswell visited Raasay in 1773. The room and bed in which Johnson slept can still be seen. The travellers had a rough crossing. "Ra'say" said Dr. Johnson, safely landed on Raasay with only the loss of his spurs, "is now the Atlantic." He related the tale of a tea table in London that he had crossed the Atlantic in an open boat, how they shudder, and what a fool they'd think me to expose myself to such a danger." A McLeod of Raasay, being in 1745, followed Prince Charles in 1745, took the precaution of making over the island to his son. After the rebellion he hid in an underground cave. His son, claiming the property, swore that his father was below ground, and that he had walked over him.

Old Age Pensions

Ontario's Average Is Second Lowest Of All The Provinces

The Brockville Recorder and Times says it is interesting to note that the percentage of persons over the age of 70 who are receiving the pensions in Ontario is lower than in any other province which takes advantage of the Old Age Pension Act. In the case of Ontario, the percentage is 31.48; in Alberta it is 40.14; British Columbia, 34.75; Manitoba, 47.50; Nova Scotia, 42.57; Prince Edward Island, 23.50, and Saskatchewan, 47.44.

The wine casks of popes and kings in the ancient palaces of Rome are to be converted into bomb-proof shelters from air attacks, authorities decided. The converted casks will provide safety for tens of thousands.

The first conversion will be made in the Vatican Palace, which shelters the Prefecture.

"Ants are the baseliest of all insects," says a naturalist. It may be so, but it's strange how their days off always coincide with our picnic.

Alcohol is now being used in Cuba for cooking and as a motor fuel.

Confucius lived to be about 72 years old, living from 550 to 478 B.C.

INTERNATIONAL COMMISSION OF AGRICULTURE

The International Commission of Agriculture which embraces the International Union of Agricultural Associations representing agriculture in all parts of the world held its general assembly at Brussels and Genoa, Belgium, recently. The League of Nations, the International Institute of Agriculture, and the International Co-operative Alliance were represented, together with 110 delegates from various agricultural organizations in different parts of the world. The three principal questions before the commission were the organization of agricultural production under planned economy, the edible fat problem, and the limitation of pig breeding and fattening, with reference to the special pig breeding attempts being made in Denmark and Holland.

The assembly devoted special attention to the present world condition of agriculture, arriving at the conclusion that in spite of the fact that useful measures had been taken in several countries since 1932, the condition of agriculture had not improved in most countries. Therefore, the commission adopted a declaration in favour of the two main problems to be solved in order to overcome the agricultural crisis are those of wheat and edible fat. On the one hand, the commission is convinced that the London Wheat agreement (1933) ought to be prolonged and improved, while on the other hand, as regards edible fat, the old civilized countries ought to take measures, or improve the existing measures, to prevent the consumption of tropical fats and what oil where they handicap the normal consumption of butter and lard. The commission's declaration also lays stress upon the necessity of improving the price of agricultural products and of reducing the cost of production as well as increasing consumption. The next assembly of the commission will take place in Oslo, Norway, in 1936.

Fruit Is Canned In Every Part of World

Fruit is canned in a large number of countries, although there are unfortunately no statistics for the majority, says the Imperial Economic Committee's report on Fruit. The United States and Hawaii (pineapples only) undoubtedly provide the bulk of the world's aggregate, and these two countries probably account for more than the remainder of the world put together. Australia and British Malaya (the latter producing canned pineapples exclusively) are the most important. Empire producers, but the output of Canada and South Africa is of growing importance. Canning is also carried out in India, and fruit canning industries have been started in Jamaica, Mauritius, Fiji, and Palestine. In Formosa pineapple canning is assuming considerable proportions, although most of the output is shipped to Japan for consumption in that country. A certain amount of fruit is also canned in Argentina, Brazil, and Chile, while Japan has recently developed an important orange canning industry. Taking these countries as a whole, the principal fruits canned are apricots, peaches, pears, pineapples, and grapefruit, although many of them can important quantities of other fruits, including raspberries, strawberries, lemons, apples (mostly canned in water), plums and cherries. These fruits, however, are the principal products of the industries of the

United Kingdom and Continental Europe. A further distinction may be made that the products of the European canning industries do not play an important part in international trade; fruit are generally canned or bottled for home consumption, and exports are small. An important industry is being built up in Russia where apples, apricots, peaches, pears and cherries are canned. In Germany strawberries are an important item, while the chief Italian product is cherries, with certain quantities of peaches and apricots. Apricots, peaches, plums and cherries are canned in small quantities in France, also in Spain, with the addition of strawberries and pears. Belgium produces canned cherries, plums and pears, and the output of the Netherlands also comprises these fruits with the addition of peaches. However, in the Netherlands very little is canned, production consisting mainly of bottled fruit. As in the case of other European countries, some of the raw material of the Netherlands industry is probably imported. There is also a canning industry in Switzerland where small quantities of a variety of fruits are processed, including strawberries, raspberries, currants, cherries and plums, with apricots, pears and apples. Samples of home grown fruit are sometimes insufficient for the needs of the industry and imported fruit is used.

At The Avalon Theatre This Week

Many popular stars will appear in the picture "Forsaking All Others" which will be shown at the Avalon Theatre this week for three days, Thursday, Friday and Saturday.

Joan Crawford, glamorous Metro-Goldwyn Star, is given ample scope to display her talents in this picture.

Although there are plenty of dramatic scenes, the star is given a greater opportunity for sparkling comedy lines and situations, than ever before in the new picture, adapted from the stage hit of the same name.

W. S. Van Dyke directed the picture and the cast includes such notable screen stars as Clark Gable, Robert Montgomery, Billie Burke, Charles Butterworth, Frances Drake and Rosalind Russell.

MARKING THE RIVERS

For the better information of motor tourists through Alberta, the provincial public works department is proceeding with the work of marking the names of rivers on bridges where main highways cross. A large number of signs have already been put in place.

Tempering Drinking Water for Livestock

After trying many ways of tempering water for cattle and horses, the Superintendent of the Beaverlodge Sub-Station has decided that, for any situation where the fire hazard does not forbid it, the best system is a wood-burning fireplace under a galvanized iron tank. The fireplace may be made of cement-concrete walls long enough and wide enough to support the metal tank in which the water is to be warmed. It is convenient to have the fireplace about 20 inches deep and to have a hinged iron door at the south or west end of it, with a four-foot brick chimney at the opposite end. Do not stick a stove-pipe length in this chimney to increase the draft, it will invalidate the fire insurance on any building situated within 60 feet unless the fact is reported to the insurance company and a much higher premium paid. Many companies decline to accept insurance where a metal chimney flue is used. The insurance agent raised no demur when the writer proposed a concrete fireplace with a brick chimney but warned against increasing the height by using a single long pipe. A flue of stone pipe, flush with the top face of the wall, a few cross bars of iron may be embedded to support the bottom of the tank. It is also well to have a sheet or two of old iron underneath the metal tank to protect its bottom, and especially its seams, from the direct blaze of the fire beneath.

Draft may be improved and heat economized by bank with earth, except at the fireplace door, and along the side from which the animals are to drink. Some protection may be provided even there.

Old fence posts, old poles or lumber, knotty wood or willow roots grubbed from the breaking make cheap fuel for such a fireplace and usually cost two fires a day will suffice.

PETROLEUM PRODUCTION
Production of petroleum in the province during July totalled 102,115 barrels, which brings the total production of the various fields for the first seven months of the year up to 729,895 barrels, compared with 761,218 barrels for the same period of 1934. The bulk of the production is of Turner Valley naphtha.

Useful Recipes for Tasty Winter Relishes

Feeding System For Early Lambs

Winter Dairy Farmers Have An Advantage

In view of the fact that a proper system of feeding is the principal reason for the successful raising of early lambs, particularly those for the market in the latter part of June and early July, farmers who understand the basic principles of winter dairying will usually make a success of raising early lambs. A feeding ration, that will produce abundance of milk, results in the production of early lambs that grow rapidly and finish for the market at an early age. Alfalfa or clover hay are essential as they are protein rich. Corn silage, manure or sugar beets are also valuable succulent feeds and besides keeping the ewe healthy they stimulate the milk flow. Ewes with lambs at foot also require a liberal grain allowance usually not less than a pound daily and ewes with twin lambs often taking up to two pounds daily. Oats are a safe feed for milking ewes, and as this grain is most common on all farms it is generally recommended for ewes in milk.

A ewe flock raising early lambs under a system of feeding as suggested above will bring their lambs forward to the spring grass without set back. As a rule, lambs at the time the ewes are turned to grass will have learned to eat both grain and roughage, and if the pasture field is accessible to the barn, it is advisable to make a creep for the lambs so that they can be fed grain while on the pasture. Grain feeding on pasture increases the rate of growth and development and makes it possible to market at an earlier date. As a rule June lambs are worth more by the pound than July lambs and July lambs more than August lambs. So that a few bushels of grain fed to early lambs is invariably marketed as finished lamb well above current market prices.

Pickling and canning time is almost over but there are still many good things to be seen on the market and it is not too late to make a variety of sweet and relishes for winter. Put up these extra jars.

- Pickled Cabbage**
- 1 cabbage, finely shredded.
 - 1 tablespoon mustard
 - 1 tablespoon corn starch
 - 1 pint vinegar
 - 1 cup brown sugar
 - 1/2 cup butter
 - 2 egg yolks
- Cover cabbage with water and cook 10 minutes when water should be almost absorbed. Mix all other ingredients together and add slowly to cabbage, stirring constantly. Cook slowly 10 minutes. Bottle and seal while hot.
- 6 Fruit Sauce**
- 6 peaches; 6 pears; 6 green plums;
 - 6 tablespoons white sugar; 6 tablespoons strong cider vinegar; 1 teaspoon salt; 6 red plums; 6 apples;
 - 6 tomatoes; 3 teaspoons mixed whole spices.
- Wash apples and tomatoes, remove stem and blossom ends, cut in small pieces and cook slowly until juice is extracted, then add spices and boil 10 minutes. Press through a coarse sieve. Peel pears and peaches and cut in slices, cut plums and remove stones and add sugar, vinegar, salt and poured apple and tomato pulp. Cook 20 minutes. Bottle while hot.

- Pepper Hash**
- 12 green peppers; 12 red peppers;
 - 1 cup sugar; 1 head celery; 2 onions;
 - 2 cups vinegar.
- Wash peppers and remove seeds. Wash celery and peel onions. Put all through a coarse mincer, stir well and add 2 tablespoons salt. Simmer 2 hours and drain off liquid. Add vinegar and sugar to pepper mixture. Simmer slowly 1 1/2 hours while hot. The liquid drained off may be boiled 5 minutes and bottled. When added to tomato juice it makes an excellent cocktail.

AGRICULTURAL SCHOOLS WILL OPEN THIS MONTH

Schools of agriculture at Olds and Vermilion will operate again this winter for the usual five months' course of instruction in agriculture and home economics, according to an announcement made by Hon. W. N. Clark, Minister of Agriculture.

Opening date for the Olds school will be October 22, and for Vermilion school a week later, October 29. Applications for registration for the new term have been more numerous than was at first anticipated, states the minister, and the expectation now is that the opening dates for the new term will be 188 and that at Vermilion 165. Territory allotted to the Vermilion school is that portion of the province north of, and including, the Wetaskiwin-Camrose line of the C.P.R., while the portion of the province south of that line is allotted to the Olds school.

WHEAT PRODUCTION

The first official estimate of Canadian wheat production in 1935 anticipates a crop of 290,541,000 bushels, comprising 16,000,000 of Durum wheat, 261,274,000 bushels of other spring wheat and 13,267,000 bushels of soft winter wheat. Included in the 261,274,000 bushels of common spring wheat are 60,000,000 bushels of wheat adjudged to be unfit for milling.

Producers Should Retain Certificates Until Called For

Participation certificates issued to producers who deliver their wheat to the Canadian Wheat Board, should be retained in the possession of the producer, says a statement issued from the Board headquarters, Thursday.

Several farmers have already forwarded their certificates to the Board offices and the Board again draws the attention to growers to the printed remarks on the certificate which instruct producers to preserve these certificates carefully or surrender to the Board when required.

When it becomes necessary for producers to surrender their certificates to the Board, instructions to that effect will be issued by the Board. Meantime, all growers holding these certificates should carefully preserve and retain them in their own possession.

A dance will be held at Spruceville Friday, October 25, under the auspices of the Anglican Young People's Association. Prices, Gents 35c, ladies free. Lunch extra. Hughes' Orchestra will provide the music. Advt.

Items of Interest from Lincoln

Owing to the wet weather there is still lots of threshing left to do in the district.

The Ladies C. C. met at the home of Mrs. Ross last week and although the roads were so bad, nearly all the members were present. A pleasant afternoon was spent, and the final arrangements for the chicken supper were made.

Don't forget the Lincoln chicken supper which is to be held on Nov. 1. The supper starts at 6 p.m. and dancing at 8 p.m. Everybody welcome.

Mr. George Sewell of Calgary paid a short visit to the district Saturday afternoon was spent, and the final last.

F. E. McLeod

Many of the Smartest Dresses of the Season \$8.50 to \$15.00

Dresses expressing the Charm of Autumn. Carefully finished copies of much higher priced Fall Fashions. Tailored and dressy types. One and two piece effects—and the lovely new fabrics. Silks with that desired dull finish. And only one of a kind. Sizes 16 to 20.

WORLD HAPPENINGS BRIEFLY TOLD

Convicted from fingerprints on a mirror they had stolen, three middle-aged men were sentenced at Bombay to imprisonment from one to three years.

Ontario department of education has ordered compulsory teaching of civics in all public and high schools in the province, starting in October. A new text book will be ready soon. Business is better all over Canada and the morale of the west is improved, Robert O. McCulloch of Galt, Ont., president of the Mutual Life Assurance Company of Canada, said in an interview in Victoria.

A post the size of a pigeon's egg and said to be capable of protecting its wearer from all danger was part of the lot recently taken from the tomb of a Manchu prince near Peking by grave robbers.

Lady Byng of Vimy, widow of the former commander of the Canadian Corps, Lord Byng, who died last June, has informed Dominion headquarters of the Canadian Legion she will take part in the Vimy pilgrimage in July next year.

Successful use of an instrument which hovers through the brain to the skull pan and burns away tissue, producing a fluid that causes hydrocephalus, a condition causing infants to become idiots, is announced by Dr. Tracy J. Putnam, of Boston Children's hospital.

Nearly \$27,000,000 of new ordinary life insurance, a slight increase as compared with the same month last year, was sold in Canada and Newfoundland in August according to returns of the Life Insurance Sales Research Bureau, Toronto. Of the total sales in Saskatchewan were \$996,000.

Hunting King's Fortune

Group Of English Chemists Searching For Gold And Jewels
Search for a legendary fortune of gold and jewels believed to be hidden in a secret passage beneath the ruins of Beeston Castle, Cheshire, England, is being carried on by a group of young Northwich chemists and engineers. King Edward II. is said to have hidden part of his private fortune and jewels in the 366-foot well of the castle before a voyage to Ireland. Some historians say, however, that a great deal of it was seized and used to put Henry IV. on the throne.

A Dog's Day

You have heard people say they "worked like a dog" all day. If it is literally true the 24 hours would be spent thus, according to Tavislock, Ont. Gazette. One hour digging out a rat, two hours gnawing a bone, one hour waiting for a cat to come down out of the tree, half an hour begging to get into the house, and the rest of the time sleeping on a mat in front of the door.

Teacher—"Tommy, if your father could save a dollar a week for four weeks what would he have?"

Seeking Old Guns

Supposed to Be in Warburg, N. B.

Two Centuries Ago

Chances have rusted at the bottom of Louisbourg harbor, Nova Scotia, for two centuries—since the days of the mighty struggle for this "Dunkirk of America"—have been sought by Canada's department of the interior.

An engineer was sent to Louisbourg from Ottawa to search for the guns, sunk in one or another of the two sanguinary sieges that centred about 18th century America's greatest stronghold. They lie about the rotting hulks of old wooden warships scuttled or shot to the bottom in the battles between British and French for supremacy on this continent.

Louisbourg, in the days before the guns were silenced forever, was the great French centre of the new world. Built around 1720 at a cost of \$10,000,000, it was so strongly fortified as to be considered impregnable. And as the years went by the town grew in splendor through French gold wrenched from peasants and poured into its coffers.

But at the height of its prosperity it was to fall. Angered at the privateering of the French sailors who made Louisbourg their rendezvous, 4,000 New Englanders besieged it in 1745. After heavy toll of life, the French garrison finally capitulated.

Britain rebuilt the fortress on an even grander scale, and then handed it back to France by the treaty of Aix-la-Chapelle in 1763 in exchange for Madras, in India. Two years later, realizing her mistake, Britain launched another siege—a combined naval and military attack.

Few stories in Canada's seaboard history hold more of the quality of heroism than the account of how these British soldiers landed from their ships in the face of a withering fire from cannon and musket. Boiling surf overturned and smashed boats; men drowned or fell before the gunfire. Yet, somehow, a few reached shore and got a footing. Their charge, behind gallant General Wolfe, drove the French and their Indian allies into the fort.

Soon Louisbourg had fallen again. And this time she was to rise no more. For six months, explosive and pick and spade, followed by two foundations. They were leveled finally, though the labor of 1,000 men and the pillage of two centuries could not completely erase their outlines.

To-day the foundations of many of Louisbourg's prominent buildings are being unearthed beneath the rubble covering them. The bases of the old fortifications are appearing, too, and they are being restored in the hope of developing the old town into a national park.

Asking For A Raise

Request As Written By Boy In South Africa

The following amusing letter has been received by Mr. Trace, Imperial Airways manager, Southern Africa area, from a former hangar boy at Bulawayo:

"Sir, I have the honor to beg, Unto thee, and pray Godmaster Forgive me from disturbing thee, Sir, please gentleman.

I am begging thee Sir, to increase my poor servant's wages. I am under thy Employer since 1927, Still I.M. getting very little Salary. For that cause, pray, Godmaster do kindly attend to thy poor servant's beseech favorably.

I am waiting for thy kindly Reply, I beg to remain, I.M. thine Capable Servant, Sixpence Kapande."

England To Receive Relic

Armada Jewel Has Been Given To Art Collection Fund

The Armada jewel, one of the most beautiful relics of Queen Elizabeth's time, is to return to Britain. It was bought at a sale room in London for 2,700 guineas, and it was announced that it had been given by Lord Wakefield to the National Art Collection Fund. The jewel formed part of the Pierpont Morgan collection of miniatures. It will go to the Victoria and Albert Museum, Kensington, London.

Out Of Politics

Henry Ford said in an interview published in The Detroit News that he is not interested in any "Ford for president" boom, or in politics generally. Discussing the business outlook, the motor magnate said: "I am not a prophet, but I have the feeling that business and wage trends will be up, and I do not believe the political campaign of next year will have any appreciable effect on business, one way or the other."

Using Eiffel Tower

Georges Mandel, Minister of Posts and Telegraphs, announced that the French Government would install a television broadcasting station on the Eiffel Tower. This station will begin operating within six months on a 180-meter wave length. The station will be established in the tower's top-most platform.

Fifty-five miles of streets in the famous borough of Westminster in London are still lighted by gas.

Soviet scientists are building a telescope which will have the third largest lens in the world. 2118

Has Big Possibilities

Vancouver Man Invents Motor Of Entirely New Type

With but four moving parts a new type of motor has been invented by a Vancouver man, developed by Vancouver men, and the first manufacturing plant for which is to be established in Vancouver.

It is called the Kinetic Motor, an absolutely new idea in prime movers that promises to revolutionize power development by its simplicity, cheap first and operating costs, compactness and light weight—less than half a pound per horsepower developed.

This amazing little engine has stood severe tests doing even more than the inventor, Eliezer Holmdorf, ever dreamed it would accomplish. The writer watched this amazing power plant, which takes up less than one cubic foot of space, and which can be operated on either compressed air or steam, operate a huge dynamo more than twenty times its size. It was silent and vibrationless.

The Kinetic Motor is being developed by Henry Hoffer and associates. Mr. Hoffer is well known in Vancouver, being a pioneer in shipbuilding and aviation.

A Dominion company is to be incorporated to manufacture and market the Kinetic Motor, Mr. Hoffer said.

The first manufacturing plant will be built in Vancouver, and a branch plant in Eastern Canada. Mr. Hoffer and associates hold 100 per cent. Canadian manufacturing rights, and 50 per cent. of American rights.

Canadian patents have been granted and patents applied for in other countries. A British group with large aviation and engineering connections is negotiating for British and European rights.

Its applications in the field of power development are practically limitless. Its market is world-wide. It can be used for boats, as a stationary engine, locomotive, automotive, mining and industrial application, and for aircraft when high-pressure generators are perfected.

"Other advantages claimed for the Kinetic Motor, as an aircraft engine are: Reliability, no fire hazard, low first and operating costs, high torque at comparatively low speeds resulting in greater efficiency and quiet operation, no vibration or noise."

The Kinetic Motor is now beyond the experimental stage, and the time is rapidly approaching when production on a large scale will be commenced, said Henry Hoffer.

The Legitimate Drama

London Theatres Have Had A Prosperous Summer Season

The theatre in London, in comparison with that in other capital cities, has had so prosperous a summer season that it is not possible to select celebrated well-wishers who no reason why it should not speedily regain as large a place in the British national life as it enjoyed just before the war, when Shaw, Galsworthy, Bennett, and others were social commentators of the first influence and importance. Two of these well-wishers, Mr. Gordon Craig, son of Ellen Terry, and M. Michel Saint-Denis, a former director of the Compagnie des Quinze, both support the same plan for this happy restoration. M. Saint-Denis in particular asks for establishment of a self-contained theatre in which authors, actors, directors, scene-shifters, and designers all work together over a long period of time, thus making possible productions of a single unified character.

Three weeks' more or less hurried rehearsal which is now the general rule. Both he and Mr. Craig demand that workers in the drama shall regard the theatre not as a trade, not even as a profession, but as a vocation, to which they are willing to render devoted and continued service for the glorification of their art—Christian Science Monitor.

Traces Of Ancient Civilization

Soviet Expedition Makes Interesting Discovery In North

An expedition of the Soviet Institute of Anthropology and Ethnology reported it had found traces of an ancient civilization near the barren Yamal Peninsula north of the Arctic circle where there are now only a few scattered nomads. The peninsula is directly south of the sea area where the Soviet icebreaker Sadko recently discovered a submerged mountain chain, believed by Soviet scientists to be part of a land which sank into the ocean long ago.

Alberta's Coal Reserves

Alberta's coal reserves total 40,200,000,000 tons and lie buried in 1,717 square miles of provincial soil, Sir Montague Barlow, one-man commission investigating collieries, was told by Dr. J. A. Allen, head of the geology department, University of Alberta, explained Alberta's topography and geological formation.

The University of California has a machine that makes snowflakes by mixing a cold and dry current of air with a warm and moist one.

There is nothing which makes a man feel so cold as an overdraft.

HARVESTING IN SASKATCHEWAN AT 20 BELOW!

Just about the middle of December, one of the most unique and interesting annual harvests to be gathered on the North American continent will be in full swing: Not wheat, but Mineral Salts. The scene will be in Little Manitou Lake, Saskatchewan. The harvesters will be the employees of the Department of Natural Resources of Saskatchewan; and the harvest itself will consist of the tiny crystals of mineral salt which form in Little Manitou Lake each year at "freeze-up." It is one of the essential conditions that the harvest be completed within a period of ten days. When the Prairie

winter comes in real earnest, and the thermometer shivers down to 20 below zero, the Departmental men, warmly attired and wearing wait-high rubber boots, gather up these crystals with specially constructed shovels and store them in the Government warehouse at Watrous, from where they are later distributed. The medicinal qualities of this saline lake, known for many years, are becoming more and more widely recognized, and as a consequence these harvest operations are assuming ever-increasing proportions, and the Lake is proving to be one of the Province's most important natural resources.

Munitions Control

United States To Supervise War Implement Industry

The U.S. national munitions control board was set out to formulate rules for the United States government's first attempt to supervise the war implement industry.

At the call of Secretary of State Hull, the board's statutory members—the secretaries of the treasury, navy and commerce—will organize to:

1. Register before Nov. 30 all manufacturers and exporters of arms, munitions and implements of war in the country, with their firm name, place of business, and products.

2. Require licenses before any future consignment of munitions can be shipped to foreign nations in peace time.

3. Define what products should be placed in the category of "arms, munitions, and implements of war."

4. Make available to President Roosevelt all arms data which may be of use to him in proclaiming an embargo on munitions shipments in the event of hostilities between any nation.

Cosmopolitan Clubs

Formation Of A Canadian Federation Takes Place At Convention

Formation of a Canadian Federation of International Cosmopolitan Clubs was the constituent club at Saskatoon, Winnipeg, Calgary and Vancouver, with Lloyd Smith, Saskatoon, as first district governor, was the work of the district convention meeting in Saskatoon.

Jack Bates, Edmonton, was named as district lieutenant-governor; Walter Stevens, Calgary, as treasurer; and Jack Colbourne, Edmonton, as sergeant-at-arms.

Delegates were present at the convention from Winnipeg, Edmonton and Calgary. Intimation was received that Vancouver would join the federation.

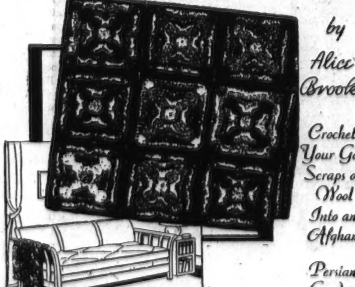

Comes From Many Sources

Canada Supplies Only Part Of Binder Twine Used

The binder twine being used to harvest Canada's grain crop comes from a number of sources. Canadian made twine supplies a large part of the domestic demand and considerable quantities made in the Dominion are exported to other countries, but binder twine from several other countries has come to share the Canadian market. Imports are from Great Britain, Ireland, Holland and recently from Belgium and Germany.

A recent check showed that only 25 of the 1,100 Golden Bibles placed in one Detroit hotel in 1928 remain in their rooms.

Household Arts

PATTERN 5439

Even though you have nothing on hand but tiny scraps of wool, you can fashion this lovely afghan. And the wool may be of different weights. Each block—4 1/2 inches square—can be done in different colors. And what a jeweled effect you have when done! The pattern is directly south of the sea area where the Soviet icebreaker Sadko recently discovered a submerged mountain chain, believed by Soviet scientists to be part of a land which sank into the ocean long ago.

To obtain this pattern send 20 cents in stamps or coin (coin preferred) to Household Arts Dept., Winnipeg Newspaper Union, 175 McDermott Ave., E., Winnipeg.

There is no Alice Brooks pattern book published

Disturbing Noises

Drive Is On In Europe For More Peace And Quietness

Not long ago Paris was perhaps the noisiest capital in Europe. It is now determined to be the quietest. It is proceeding positively against all who by their noise disturb the "tranquillity" of Parisians or upon "internal serenity" by "offensive uproar."

Thus the prefect of police, in his exhortation to police officers to do their duty. As in London, motor horns are prohibited in the night hours. With this single exception our own laws against offensive noises are vague, and seldom enforced. Those in Paris are particular, and are to be supported by the utmost vigilance on the part of the police. A rackety vehicle is forbidden. So is a raucous motorhorn, a siren, a carpet-beater, a street-crier, or a disturbing loudspeaker. When complaints are made it is the duty of the policeman to take immediate action.

In London, we continue to suffer unregulated horns, pneumatic drills, gramophones, bagpipes, and even brass bands, and because we are not by nature a noisy people we suffer in silence and without redress.—London Spectator.

Wars Of Conquest

One Thing Of Which British Empire Cannot Be Accused

What war of conquest has the British Empire been engaged in for a hundred years and more, or ever will be again? The Boer War, says some one? War in the East, say others? The British Empire defeated the Boers in the interest of the British white people of South Africa—and then gave the Boers back their independence and their country. Was that conquest? Britain took possession of Egypt to end bloody anarchy—and has given Egypt its independence. Britain took Mesopotamia from the Turks during the World War; she has given Mesopotamia its freedom. Britain took possession of Palestine in 1918—and is training the people of Palestine for independence. Britain long ago captured India; she is giving India self-government. Britain has accepted and swallowed without even a wry face every grouch and kick and squeal for autonomy and independence that any overseas British colony has ever made, including Canada most of all. What has Britain to do with "wars of conquest?" Don't let us fool ourselves by such talk.—Ottawa Journal.

Busy Year For Sun

More Eclipses In 1935 Than For Past 130 Years

The sun this year presents its greatest show of eclipses for the past 130 years. The moon will have passed between the sun and the earth no fewer than five times, and the moon will be in the earth's shadow twice. This according to Professor Alfred H. Joy, secretary of the Mount Wilson Observatory, is the greatest number of eclipses possible in one year. Not since 1860 have the sun's rays been obscured so often, states Reuters' correspondent in Pasadena. It will be only the second time since 1255 that there have been five solar eclipses in one year, and there will not be another such number until the year 2455.

Old French Colony

Home Rule Is Proposed For St. Pierre And Miquelon

After almost three centuries of rule from across the sea, self-government has been offered to St. Pierre and Miquelon, small island colony off the coast of Newfoundland. The island is a remnant of France's great colonial empire in North America. Government by elected representatives rather than a governor appointed by France is proposed by the home administration. Acceptance or rejection of the plan is up to the island's 5,000 people themselves.

Making Ten-Year Tour

Bicyclists From Sumatra Do Not Believe In Speed

Two Sumatran bicyclists who do not believe in the modern craze for speed have arrived at Bombay on a ten-year tour of the world. They started from their home in Sumatra in July, 1931, and have taken over three-and-a-half years to complete 5,000 miles on their bicycles. They made fairly long stops in India, China, Siam and Burma and in various parts of India in order to learn the language and study the people and their religion.

Seek Publicity

A resolution urging the Dominion government to appropriate an appropriation of \$100,000 for publicity in the Canadian newspapers to promote the domestic consumption of fish, was unanimously approved at Montreal at the one-day convention of the Canadian Fishermen's Association.

By 1936, the United States public debt is expected to total \$34,258,000,000; approximately \$270 for every man, woman and child in the country.

D. E. Warford, of Sawtelle, Calif., lays claim to being the most tattooed man in America.

ROYAL YEAST CAKES

give you perfect breads, rolls, coffee cake and buns...

Rolls and Buns are temptingly varied to your menu. See page 13 of Royal Yeast Cake Book for recipe.

The whole family will like these tender Parker House Rolls. Recipe in Royal Yeast Cake Book, page 12.

It's easy to make this delicious Coffee Cake. Recipe on page 12, Royal Yeast Cake Book.

LIGHT, tasty bread is largely a matter of perfect leavening. That's why it is so important to use dependable yeast. With Royal Yeast Cakes you can be sure of full leavening power every time. Each Royal Yeast Cake is protected by a special airtight wrapper. They keep in perfect condition for months.

To Shorten Ocean Trip

Irish Free State Plans Ship-to-Shore Planes

London will be brought within three days of New York when civil aviation plans which are being devised by the government of the Irish Free State come into operation—possibly next year.

The scheme aims at a service of high-speed aircraft of the Douglas type, to intercept the big Atlantic liners off the west coast of Ireland and to speed the passengers to London, with the saving of a full day of travel time.

With ships of the type of the Queen Mary and Normandie the Anglo-Irish air ferry will make London and New York a matter of a mere week-end trip.

From Galway on the west coast of Ireland to Southampton by liner is at present a full day's journey, with an additional two hours to London. The new air link would bring Galway within three hours of London.

It is proposed to use amphibian machines.

From Dublin the idea is to form a new air link not only with London but also with Paris, Brussels, and Berlin.

England's Wheat Acres

A considerable increase in wheat acreage has resulted from the wheat act in England and Wales, from 1,268,000 acres in 1932 to 1,660,000 in 1933 and 1,771,000 in the present year. Meanwhile the oat crop has been reduced by 205,000 acres.

One can be a walking "Encyclopedia Britannica" and yet be the most useless and stupid man on earth.—Sir Charles Grant Robertson.

SYNOPSIS

Nancy Nelson is a sub-deb, a gay, irresponsible girl of nineteen, with no care beyond the choice of her costume for her coming-out party. Suddenly, in the market crash, her indulgent father loses all he has, and his family is faced with the necessity of a simpler method of living. At this juncture a letter is received from an eccentric relative in Colorado, who offers the girl a home on what seems to be impossible conditions.

After much consideration Cousin Columbine's offer is accepted, and Nancy and Jack arrive at Pine Ridge. Nancy set out one afternoon to climb to the top of a hill so as to obtain a view of the surrounding landscape and misses the path Aurora Tubbs had told her to follow. A truck comes along the road, driven by Matthew Adams, and she asks him which way to go. They ascend the hill, look around, and then go on to Cousin Columbine's. There Mark Adams tells Nancy that his brother Luke has broken his leg, and that Jack Nelson has been hired to help out while Luke's leg gets better. With Jack away, Nancy finds that she is lonesome, and having no books to read, the idea of starting a public library at Pine Ridge seems a good one, and Nancy writes home to get her parents to send all the books they could spare and all they could induce others to let them have.

Nancy and Matthew Adam go Christmas shopping in a neighboring town. On their return to Pine Ridge, Nancy is amazed to see the Columbine residence all lit up, and asks Matthew if he knows why. He said: "Let's go in and see. Then Nancy learns that she is having her debut, but in a different setting than had been planned for her in Boston. Nancy's parents and friends gave their liberal support, her room was full of books, and a sizeable box arrived in due course. Father Adam painted a sign for the library, and the Adams boys worked on the shelves for the books and decorations to make the room look presentable.

Jack Nelson, Matthew Adam, and Nancy go to the prairie home of Matthews' uncle for the ride, and after Nancy and Jack leave for home, they are caught in a blizzard.

Now Go On With The Story.

CHAPTER XVIII.—Continued

Where that empty milk can came from they never knew; but for a while it created not only diversion, but a feeble warmth that was dearly welcome. With the aid of a pocket knife Jack ripped the leather covering from the seats, and used excelsior stuffing for a fire. School books came next, but not until darkness was descending and all hope of seeing the missing driver was given up. "I'd go for help," Jack told his sister grimly, "but even if the road weren't drifted, I'd never make it with night coming on. We've been here about four hours, haven't we? It seems a lifetime already, and these youngsters have been here a good while longer. If things don't get better in the morning I'll have to go. Nancy. Have you noticed?" (he lowered his voice), "those twins are getting drowsy, both of 'em; and so's Paul Evans. I can't tell whether they're just sleepy, or— Look here, sis! It's up to us to keep them moving!"

Darkness came fast; but slowly, terribly slowly, it seemed to Nancy, hour after hopeless hour dragged on. Wind whistled along about them, and at the back of the bus a snow-drift had collected, stifling in through the broken window and making their cramped space smaller still. Though all worked desperately to keep the fire burning, a sudden, especially fierce gust had blown it out; and there were no more matches. Jack had long since relinquished his sheepskin jacket; and Nancy's knitted skirt was pinned securely about a shivering boy.

Prudence at games—prancing up and down the aisle—anything to keep blood circulating in those small, cold kiddies, was kept up valiantly; but as night descended the children who were not crying had dropped asleep, huddled together in a corner, and tears of fright and cold met Nancy's eyes as she looked down at them.

VICKS
VAPORIZER

Used in Time, Helps
Prevent Many Colds

And (with a clutch of fear), was the wind rising?
Time passed, interminable hours that seemed unending. The dreaded wind died down, returned, and died again, not to return. No one could say just when the blizzard ceased, for one by one the children were succumbing to the portentous drowsiness. Once Nancy succumbed herself, to be aroused by the frantic, pounding flaps of Tommy Osceola.

The cold was still intense when that second dusk approached the prairies; but the whimpering voices were hushed in an ominous silence. Most of the children had given up by now, completely spent with cold, and hunger, and even fright. For there had been strange happenings since Jack's departure. Twice they rejoiced at the sound of approaching horses, only to find that their ears must have deceived them. Two of the children had "seen" the school-house, and, as the mirage faded, burst into tears of disappointment.

Working courageously on icy arms and legs, Nancy knew, a sense of terror creeping through her, that she was giving out. Her eyelids kept closing against her will. At times it seemed impossible to drag them open. Her hand went numb; her bare legs curiously lifeless.

(To Be Continued)

New Swan King On Thames

Black Bird Takes Command Of River At Windsor

There is conversation on the Thames at Windsor. A large black swan has taken command of the entire reach.

The natives, His Majesty's white swans, have fled in terror. Boatmen look upon the new arrival with disfavour. There is an old superstition that when a black swan appears, black days are ahead for all who gain their living on the river.

The "Black Terror," as the swan has been christened, tackled and defeated Methuselah, the uncrowned King of Windsor swans. Methuselah has killed many swans, has drowned dogs caught swimming in his sacred domain, and has even attacked Eton boys and other people using the river.

Yesterday, however, he met his Waterloo near Windsor Bridge in full view of hundreds of holiday makers.

The "Black Terror" ducked and dived and led his opponent into a cunning trap. He appeared to weaken, and Methuselah, bristling with self-confidence, dropped his guard. In a flash the "Black Terror" had secured him in a stranglehold. Methuselah was only too glad to see boatmen, who race to his assistance.—London Daily Sketch.

High Speed On Roads

Safe Driving Is Public Responsibility States Sir Malcolm Campbell

Sir Malcolm Campbell, the world record-holder for auto speed, during the course of a speech at a luncheon given in his honor in New York, declared that fast driving had no place on regular highways, and that road safety was a public responsibility. He further added, "I am the last person in the world to suggest high speed on the road." This is excellent advice from one who has proved that he can travel faster than anyone else.—Bradford Expositor.

Interference Not Allowed

Radio Hovers Will Not Be Tolerated In France

France is conducting a vigorous campaign against radio "hovers," people who interfere with their neighbors' radio reception. In one month the French Ministry of Posts and Telegraphs has caught and punished 13,465 hovers. It is an offense in France to hinder radio reception, and the purchase of what is called "anti-parasitic" apparatus is obligatory in cases where refrigerators, elevators and similar equipment cause inconvenience.

Plenty Of Advice

Emperor Haile Selassie Told How To Save His Country

Emperor Haile Selassie of Ethiopia has received stacks of letters and cablegrams from people in other countries offering him advice on how to save his country and to defeat Italy. Some communications have been received from foreign army officers occupying positions of Haile Selassie, expressing his thanks and gratitude for some of his correspondents with photographs, autographs and stamps.

Customer—"I want to buy a present for my wife."
Pretty Girl Clerk (in city)—"Could I interest you in a sun-suit?"
Customer—"You certainly could, but let's get the present fixed up first."

Most animals flee at the approach of an aeroplane, but not the lion. A pilot flying low over a lion saw it suddenly spring and tear off a portion of the aileron fabric.

Teacher: "Who was Homer?"
Student: "I am not sure, but I think he was the fellow who wrote the 'Oidias' and the 'Idolcy'."

A man could learn a great many things if he didn't think he already knew them. 2118

Champion Autograph Hunter

Has Collected Signatures Of Over 3,000 Famous Persons

Even kings give their autographs to Reginald Hunt, of Grimsouth Court, York, Yorkshire, who is characterized in London as the world's champion and "cheekiest" autograph hunter.

This "ace" of autograph hunters has collected the signatures of 3,000 famous people, having spent 20 years and travelled 10,000 miles in pursuit of his hobby.

His "bag" which is probably unequalled in the world, includes the signatures of five kings and queens; T. E. Shaw (Lawrence of Arabia), Gandhi, six American presidents, Charlie Chaplin, Mussolini, 152 wearers of the Victoria Cross.

"Cunning, cheek, ceaseless persistence and even trickery must be the chief weapons in the armoury of the autograph hunter if he wishes to succeed," Reginald Hunt proudly admits.

"I have had to employ them all—and I would not have missed the experience for a lot of money."

"For when I look through my collection I am given many glimpses of life that not even the most intimate autobiographies reveal."

George Bernard Shaw's cold, relentless logic, for instance, is shown on the signed photograph, on which he wrote: "I am sending my autograph to Reginald Hunt, who has contracted the vice of collecting things."

"De Valera was a difficult catch. He ignored three letters. The fourth time I signed myself 'Patrick O'Flanagan.' Back came the autograph I wanted by return of post."

Knowing the retiring nature of his quarry, Hunt sent the late Lawrence of Arabia a page from a magazine on which was a portrait—asking him to sign it. On the other side there happened to be a cartoon of a sergeant-major.

A few days later Lawrence, who was then plain Aircraftman Shaw, wrote to say that normally the pilot would have been returned unsigned. But when Hunt's letter was opened the sergeant-major was in the office and carried off the cartoon to be framed in the sergeant's mess.

"So I am afraid you have lost both sides of that sheet of paper," wrote T. E. Shaw, the letter concluded: "That was much better than I had hoped," said Hunt.

Royal signatures are, Hunt confesses, the most difficult to obtain, yet his bag includes 28 royal signatures, nearly all of which are of paper, including those of five kings and queens.

He got that of the ex-Kaiser which consists of a signed photograph—after five unsuccessful applications. His historical signatures—including that of Queen Anne and Queen Elizabeth are extremely valuable—even though they did not involve Hunt in any personal adventures.

His most valued treasure is a single sheet of paper containing the signatures of 153 war heroes, all of whom were killed in the first world war. The highest decoration a British soldier can get. These war heroes died with the Prince of Wales four years ago in a gilded chamber at the House of Lords.

A Novel Insurance

French Excursionist Has Fare Returned If It Rains

"It rains, you get your money back."

Such is the unusual clause which figures in the novel insurance policy issued by the Northern Railway of France to persons who take part in its Sunday excursions to the seaside resorts of Boulogne and Trepont on the Channel Coast.

Each tourist, in addition to his fare, pays a small sum as a premium, and if it rains between 2:30 and 5:30 p.m. on the day of his excursion, his fare is immediately reimbursed. So far as is known, this is the first time that a railroad has gone into the "rain insurance" business.

To determine whether it has rained or not, two rain-meters have been established, one in Boulogne and the other in Trepont. If they register rain, each person who signed up for rain insurance gets his money back.—French Railways Bulletin.

War Prison Fals Meet

Corporal H. A. Smith, of an English regiment and Private F. R. Stocks, of the Australian army, were prisoners and pals in Germany during the war. Smith returned to England and Stocks went to the other side of the world. Recently Stocks was getting a haircut in a Sydney shop when some remarks of the operator stirred his memory. It turned out to be Smith, now playing the barber trade.

New Heart Stimulant

Like the Hawaiian moonlight, the Hawaiian night-blooming cereus has long been accused of having a romantic heart effect upon visitors. Now, it develops, the cereus truly is a heart stimulant. Fresh blossoms are being gathered and shipped in 100-pound lots to a drug firm in New York city, which makes them up into "cactus pellets," used to invigorate tired hearts.

AIR CELL battery lives on air for 1000 hours..

Here is the "A" battery which has revolutionized the radio industry. It is making the battery set as efficient and as simple to operate as an electric receiver.

Eveready Air Cell needs no recharging. It energizes itself by "breathing" oxygen—it literally "lives on air" for 1000 playing hours.

With the Air Cell there is no gradual slackening of power which so often spoils radio reception. It maintains itself at full strength to the end.

Don't envy your city friends who have electrically operated radio sets. Now you can have the same clear reception with no trouble or bother. That is, if you buy a new Air Cell Radio.

These new sets, now made by all Canadian radio manufacturers, use the Eveready Air Cell "A" battery which does away with storage batteries and needs no recharging.

The amazingly long life of the Air Cell—with no upkeep costs—gives you true economy.

Eveready Layerbilt "B" Battery is the ideal companion.

Foundation Of Fortune

Cornelius Vanderbilt Worked Hard For His First Hundred Dollars

A youth of 16, living on Staten Island, N.Y., went to his mother and asked her to lend him \$100, with which to buy a boat. She had the money, but declined to give or lend it to her son. She did, however, make him a proposition. Adjoining the house was an eight acre field. She told him if he would plow and plant that field before his birthday, a matter of 26 days, she would give him the money.

It looked like a big job, but the youngster tackled it with determination. He got other boys to help him by promising them rides in his boat; with their assistance he not only got the whole field planted, but inclosed it with a wall made from stones taken from the land.

He purchased his boat which, it soon developed was not to be used for pleasure. Instead he began transporting produce for the farmers. The business prospered and boat after boat was added to the fleet. His friends nicknamed him "The Commodore," and that name stuck throughout his lifetime. The boy was Cornelius Vanderbilt.—Christian Science Monitor.

Birds' nests used by the Chinese for making into soup are about the size of an oyster-shell and it takes thirty-two to weigh a pound. The soup costs about \$2.50 a bowl.

The average duration of an earthquake shock is estimated by experts at forty-five seconds.

Will Not Face Storm

Experiment Was Conducted In France With Carrier Pigeons

Carrier pigeons won't carry on in a storm that shattering another charged illusion of devotion to duty. An experiment was carried out by French military experts and pigeon fanciers in the Bassee-Landes region here where atmospheric conditions similar to an electrical storm were produced. This was done by generating powerful "charged" Hertzian waves of 200 amperes. At the same time several hundred military pigeons were released from their cages. Sensing an electrical storm, the pigeons hovered about the aerial a few minutes, then flew right back to their cages. They refused to budge into the "storm" was over.

A Clever Photographer

Had Brilliant Idea When He Missed Customer's Address

A young man living at Weingarten, in Wurttemberg, had himself photographed, but the photographer mislaid the address, to which the photograph should have been forwarded. What was the photographer to do? He stuck a proof of the photo on the outside of the envelope and added the words "To this gentleman in Weingarten." The photographs reached their correct destination safely.

It has been found that eyelashes grow about one-twentieth of an inch each week.

The elephant seals are the biggest of seals some attaining a length of 17 feet.

Little Helps For This Week

Even no father, for so it seemed good in Thy sight. Matthew 11:26.

Let nothing make thee sad or fretful.

Or too regretful; What God hath ordered must be right.

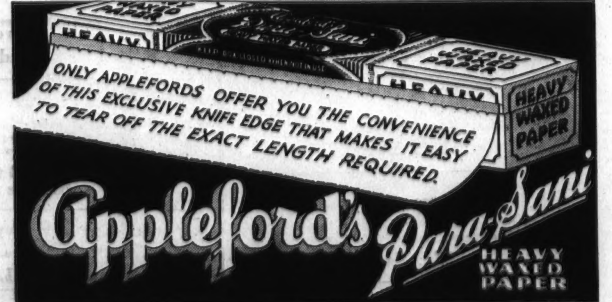

Then find it in thine own delight.

If we listen to our self-love we shall estimate our lot less by what it is than by what it is not, shall dwell on its hindrances and be blind to its possibilities, and comparing it only with imaginary lives shall indulge in flattering dreams of what we would do if we had the power, give if we had wealth, and be if we had no temptations. If we yield ourselves unto God and sincerely accept our lot as assigned by Him, we shall count up its contents and disregard its omissions, and be it as feeble as a cripple's or as narrow as a child's, we shall find in it resources of good surpassing our greatest aims, and sacred claims that will keep awake our highest will.

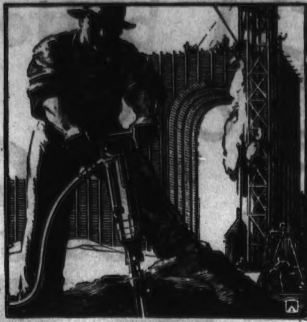

Preserving Old Types

Specimens of local breeds that are becoming extinct are to be preserved in the museum at Gloucester, England. A typical Old Gloucester heifer has recently been added, and it is intended to provide representative specimens of several other local breeds. Among those already in mind are a Berkshire two-spot pig, a Cotswold sheep and a Cotswold cat.

Money talks, but not when tied and thrown into a vault.

Prevention of Frost Injury To Potatoes

Frost injury is so important to the potato growing industry of Canada that it is included with the list of potato diseases considered most objectionable from the standpoint of seed certification. Canadian potato growers, therefore, should learn to distinguish between low temperature injury and the diseases having symptoms frequently associated with those found in tubers which have been exposed to low temperatures. The problem of frost injury has been under investigation by the Division of Botany, Ottawa, for a number of years. Results of these tests show that a great deal may be accomplished to ward off preventing the losses arising from this type of injury, which occurs in the field, in storage, and in transit to market, and gives rise to such disadvantages as destructive rot, weak plants and to poor stands resulting from seed piece decay.

The term "frost injury" refers to the condition in potatoes arising from exposure to freezing temperatures in the field. "Freezing injury" is similar to field frost injury but is caused by exposure to low temperatures after the crop has been dug. A third type, known as "chilling" occurs when the temperature drops to the freezing point of water; although, actually, ice begins to form in potatoes at approximately 29 degrees Fahrenheit, a figure which varies with varieties or even in individual tubers. This individual tolerance to low temperatures may explain, in a measure, the appearance of frozen tubers frequently scattered throughout the storage bins.

Investigations conducted at the Dominion Laboratory of Plant Pathology, Charlottetown, P.E.I., show that three distinct types of injury to potatoes may result from exposure to low temperatures, as follows: (1) "Frost necrosis", occurring in tubers having been exposed to low temperatures sufficiently long to cause the formation of ice crystals. When cut open, such tubers exhibit darkened areas of three different types, namely: a Ring necrosis, recognized as a definite ring at the stem-end of the potato and due to short exposures at low temperatures; b) hot necrosis, also indicating an early stage of frost injury and recognized as a net-like pattern in the potato tissue; c) blotch, which appears as irregular patches varying in color from a light grey metallic tint to dark brown or black. This type of injury results from excessive exposure to low temperatures and in advanced cases the potatoes are useless for seed purposes.

2. "Freezing solid", occurs when tubers are exposed to temperatures below the freezing point of potato tissue. When thawed out they are rapidly reduced to a soft, wet condition followed by decay.

3. "Turning sweet". Potatoes turn sweet if stored for a number of weeks at temperatures near or slightly above 32 degrees Fahrenheit, a feature due to the gradual changing of starch to sugar.

Potatoes injured by frost are considered diseased, and as such are not reliable for seed purposes because of the retarded sprout development and the possibility of affected sets rotting in the ground. Losses due to low temperatures may be satisfactorily eliminated by the adoption of four very beneficial measures, as follows:

1. Harvest the crop before heavy frosts.
2. Store the crop in rooms having a temperature between 35 to 40 degrees Fahrenheit. By so doing the potatoes will not turn sweet and necrosis will not develop.
3. If potatoes are piled they should have a covering sufficient to prevent the temperature from dropping below 30 degrees Fahrenheit.
4. Potatoes transported during the cold months should be protected by straw, sacks, or canvas. They should be carried in a heated car and loaded so as to assure the free circulation of air throughout.
5. When it is known that potatoes have been undercooled they must not be handled until it is certain that the temperature is above freezing point.

Mrs. Emma Adair Passes Away

Mrs. Emma Adair, a well known and respected resident of this community for the past 37 years, passed away at Lacombe Saturday evening. She was born in Toronto, Ontario, on September 12, 1860. She was married at Guelph, Ont., in 1880, and her husband predeceased her a few years ago. She is survived by her daughter, Mrs. Mabel Russell, of the Lacombe district, and by two brothers, Alfred and William Tucker, and by two sisters, Mrs. John Hopps and Mrs. R. F. Dickson. Mrs. Adair was a member of the Seventh Day Adventist church. The funeral service was held at the local mortuary home, Rev. Fred Ialer of the Baptist Church officiated.
